XX Thrombopoietin receptor-binding/activating peptide(s) and peptide
XX mimetic(s) - useful in treatment of haematological disorders, esp.
XX thrombocytopenia resulting from chemotherapy, etc.

XX Claim 18; Page 89; 106pp; English.

XX The present sequence is a compound which binds to thrombopoietin (TPO)
XX receptor (TR). It has a molecular weight of < 8000 Da, and a binding
XX affinity to TR as expressed by an IC50 of no more than about 100 mum. The
XX compound (especially if modified, see features table) can be used for
XX treating patients suffering from haematological disorders and
XX thrombocytopenia resulting from chemotherapy, radiation therapy or bone
XX marrow transfusions. The peptide may also be used to maintain the
XX proliferation and growth of TPO-dependent cell lines and for use in
XX biological research, for detecting TPO receptors on living cells

XX CC The present sequence is a compound which binds to thrombopoietin (TPO)
CC receptor (TR). It is part of a dimer linked by the omega amino acid to
CC the omega amino acid in the sequence in AAW19534. The compound can be
CC used for treating patients suffering from haematological disorders and
CC thrombocytopenia resulting from chemotherapy, radiation therapy or bone
CC marrow transfusions. The peptide may also be used to maintain the
CC proliferation and growth of TPO-dependent cell lines and for use in
CC biological research, for detecting TPO receptors on living cells

 XX
 PS Claim 24; Page 90; 113pp; English.
 XX
 CC The invention relates to a novel pharmacologically active peptide
 CC conjugate having a reduced tendency towards enzymatic cleavage comprises
 CC X and Z, where: (a) X is a pharmacologically active peptide sequence; and
 CC (b) Z is a stabilising peptide sequence of 4-20 amino acid units
 CC covalently bound to X, where each amino acid unit in the stabilizing
 CC peptide sequence, Z being selected from Ala, Leu, Ser, Thr, Tyr, Asn,
 CC Gln, Asp, Glu, Lys, Arg, His, Met, Orn, and amino acid units of formula -
 CC NH-C(R1)(R2)-C(=O)- (I), where: R1 and R2 are H, 1-6C alkyl, phenyl, and
 CC phenyl-methyl, where 1-6C-alkyl is optionally substituted with 1-3
 CC substituents selected from halogen, hydroxy, amino, cyano, nitro,
 CC sulfonyl, and carboxy, and phenyl and phenyl-methyl are optionally
 CC substituted with 1-3 substituents selected from 1-6C-alkyl, 2-6C-alkenyl,
 CC halogen, hydroxy, amino, cyano, nitro, sulfonyl, and carboxy, or R1 and R2
 CC 2 together with the C atom to which they are bound form a cyclopentyl,
 CC cyclohexyl or cycloheptyl ring, e.g. 2,4-diaminobutanoic acid and 2,3-
 CC diaminopropanoic acid; the ratio between the half-life of the peptide
 CC conjugate and the half-life of the corresponding active peptide sequence,
 CC X, when treated with carboxypeptidase A or leucine aminopeptidase in
 CC about 50 mM phosphate buffer solution at about pH 7.4 and about 37 deg C
 CC or in serum or plasma is at least about 2 (preferably at least about 10),
 CC or when the pharmacologically active peptide X is not orally absorbed,
 CC the conjugate is adsorbed, or a salt, with the proviso that the
 CC pharmacologically active peptide conjugate is not selected from sequences
 CC (ADI24837)-(ADI24841). The peptide conjugates can be used for treating
 CC e.g. pain, HIV, cancer, diabetes, incontinence, hypertension, amnesia,
 CC Alzheimer's disease, fever, depression, sex hormone regulation, eating
 CC disorders, schizophrenia, osteoporosis or insomnia. They can also be used
 CC for treating e.g. CNS disorders and as contraceptives. The conjugated
 CC peptides are less susceptible to degradation by proteases compared to the
 CC corresponding free pharmacologically active peptides. This sequence
 CC represents a pharmacologically active peptide as the X part of the

```
CC peptide of the invention.

XX
XX Thrombopoietic peptides which activate mpl receptors and increase the
XX production of platelets or platelet precursors, useful for treatment of
XX diseases which involve thrombocytopenia.
XX
XX Claim 7; Page 60; 91pp; English.
XX
XX A compound which binds to an mpl receptor comprising a thrombopoietin
XX mimetic peptide (TMP) dimer joined by a linker [TMP 1-(L1)-TMP 2], is
XX new. TMP 1 and TMP 2 are amino acid sequences varying from at least 10 to
XX 14 residues in length comprising X 2-X 1 0, X 2-X 1 1, X 2-X 1 2, X 2-
XX X 1 3, X 2-X 1 4, X 1-X 1 0, X 1-X 1 1, X 1-X 1 2, X 1-X 1 3, and X 1-
XX X 1 4. X 1 = I, A, V, L, S or R; X 2 = E, D, K or V; X 3 = G or A; X 4 =
XX P; X 5 = T or S; X 6 = L, I, V, A or F; X 7 = R or K; X 8 = Q, N, or E;
XX X 9 = W, Y or F; X 1 0 = L, I, V, A, F, M, or K; X 1 1 = A, I, V, L, F,
XX S, T, K, H, or E; X 1 2 = A, I, V, L, F, G, S, or Q; X 1 3 = R, K, T, V,
XX N, or G; X 1 4 = A, I, V, L, F, T, R, E, or G; L 1 = linker comprising
XX 1 to 20 amino acids; and n = 0 or 1. The compounds bind to and activate
XX the c-Mpl receptor which mediates the activity of endogenous
XX thrombopoietin. The TMPs are useful for increasing the production of
XX platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which
XX is useful for treatment of diseases which involve thrombocytopenia, e.g.
XX aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency
XX virus associated ITP, and systemic lupus erythematosus

XX Novel composition of matter comprising an Fc domain and pharmacologically
XX active peptides, useful for treating cancer and autoimmune diseases.
XX
XX Claim 19; Page 189; 608pp; English.
XX
XX The present invention describes composition of matter (I) comprising an
XX Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
XX (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
XX independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
XX (L2)d-P2-(L3)e-P'3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
XX P3, and P4 = are each independently sequences of pharmacologically active
XX peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
XX c, d, e, and f = are each independently 0 or 1, provided that at least 1
XX of a and b is 1. The composition can have cytostatic, antiasthmatic,
XX thrombolytic and immunosuppressive activities. DNAs, vectors and host
XX cells from the present invention can be used for producing pharmaceutical
XX compositions. The compositions are useful for treating cancer, asthma,
XX thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
XX such as Fc receptor binding, protein A binding, complement fixation, and
XX possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to

 PT Activating thrombopoietin receptors in cells, used to treat
 PT thrombocytopenia and hematological disorders, comprises contacting cells
 PT with peptides and peptide mimetics attached to hydrophilic polymers.
 XX
 PS Disclosure; Col 69-70; 128pp; English.

Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that bind to and activate the human thrombopoietin receptor (TPO-R). Methods of activating thrombopoietin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders including thrombocytopenia and platelet disorders. They are used in vitro as unique tools for understanding the biological role of thrombopoietin receptor. The peptides can be used to detect TPO receptors on living cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in situ staining, fluorescence-activated cell sorting, Western blotting and enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed progenitors alone or in conjunction with additional cytokines

XX

PS Claim 18; Page 6; 113pp; English.

XX

XX The present invention describes an immunoglobulin molecule or its fragment

CC (I) comprising a region where amino acid residues corresponding to at

CC least a portion of the complementary determining region (CDR) are

CC replaced or fused with biologically active peptides e.g. a peptide

CC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic,

CC that is flanked with proline at its carboxy terminus. (I) has

CC antianaemic, haemostatic and nephrotropic activities, and can be used as

CC a stimulator of proliferation, differentiation and maturation of

CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful

CC for stimulating proliferation, differentiation or growth of

CC promegakaryocytes or megakaryocytes, where (I) is contacted with

CC promegakaryocytes or megakaryocytes, which results in increased platelet

CC production. (I) with a region where amino acid residues corresponding to

CC a portion of CDR is replaced with an EPO mimetic, or which has one or

CC more of its CDRs fused to an EPO mimetic, is useful for increasing the

CC production of red blood cells, where (I) is contacted with haematopoietic

CC stem cells or their progenitors. (I) is useful for diagnostics or
 CC therapeutics, in cell isolation strategies, and for treating patients
 CC suffering from deficiencies in cell populations caused by disease,
 CC disorders or treatments related to the suppression of haematopoiesis.

XX Adenoviral coat protein which permits production of adenoviral vectors
 PT that bind and infect host cells not naturally infected by adenovirus,
 PT comprises various non-native ligands.

XX Claim 4; Page 45; 45pp; English.

XX The invention relates to adenoviral coat proteins comprising various non-
 CC native ligands. The invention provides a method of controlled gene
 CC expression utilising selectively replication competence and also a method
 CC and a composition for targeting an adenoviral vector. A system
 CC comprising a cell having a non-native cell-surface receptor, and a virus
 CC having a non-native ligand which binds the non-native cell-surface
 CC receptor of the cell is useful for propagating a virus and also for
 CC assaying gene function. The system is also useful for isolating a nucleic
 CC acid encoding a product comprising a desired property. Further the system
 CC is useful for identifying functionally related coding sequences.

XX Adenoviral vector comprising a non-native nucleic acid encoding a
 CC therapeutic agent such as anti-tumour agent, preferably tumour necrosis
 CC factor and a second non-native nucleic acid encoding an agent that
 CC facilitates imaging and a targeting agent is useful for treating an
 CC animal. The therapeutic agent can be used to treat cancer of the brain,
 CC lung, ovary, breast and prostate. The present sequence is human non-
 CC native ligand attached to an adenoviral vector

XX New thrombopoietin synthebodies, useful for stimulating proliferation,
 PT growth, or differentiation of hematopoietic cells, for treating or
 PT preventing hematopoietic or immune disorders, e.g. thrombocytopenia.

XX Claim 62; Page 71; 97pp; English.

XX The invention discloses a variant of an immunoglobulin (Ig) variable
 CC heavy or light chain domain that comprises at least one complementarity
 CC determining region (CDR) and framework regions flanking the CDR. The CDR
 CC also has added or substituted to it, at least one binding sequence which
 CC is heterologous to the CDR and is an antigenic, agonistic sequence from a
 CC thrombopoietin (TPO) receptor binding sequence. The antigenic sequence
 CC can be a binding sequence heterologous to the CDR, a cytotoxic T-
 CC lymphocyte (CTL)-epitope sequence, a T-helper cell sequence, a B-helper
 CC cell sequence or a combination of each. The variant or thrombopoietin
 CC synthebody, pharmaceutical and vaccine compositions are useful for
 CC stimulating proliferation, growth or differentiation of haematopoietic
 CC cells, particularly platelet progenitor cells. The variants are also
 CC useful for treating or preventing haematopoietic or immune disorders
 CC resulting from chemotherapy, radiation therapy, or bone marrow
 CC transfusions (e.g. thrombocytopenia or disseminated intravascular
 CC coagulation). Compositions comprising the synthebodies can be used for
 CC the mobilisation, amplification and ex vivo expansion of stem cells and
 CC committed precursor cells for autologous and allogeneic transplantation
 CC as well as for the expansion of stem cells for gene therapy. They are
 CC also useful as diagnostic or analytical reagents for studying the

CC function of thrombopoietin and its receptor in vivo or in vitro. The
CC sequence presented is the TPO receptor (MPL) agonist peptide, AF12505

XX covalently linked to combining site of the antibody.
XX
XX Example 7; Page 62; 56pp; English.

The present sequence is that of thrombopoietin (TPO) mimetic peptide
AF12505, which mimics the activity of recombinant TPO. The invention
provides antibody targeting compounds that are used to reprogram the
specificity of an antibody. The antibody targeting compound is linked to
the combining site of the antibody, such that the modified antibody takes
on the binding specificity of the targeting agent. In an example from the
invention, a TPO receptor targeting antibody compound was prepared by
covalently linking peptide ABL12505 to aldolase monoclonal antibody 38C2.
The TPO receptor targeting antibody compound can be used to treat
CC thrombocytopaenia resulting from chemotherapy and bone marrow
CC transplantation

XX ecotropic envelope protein useful for treating cancer.
XX
XX Disclosure; SEQ ID NO 1; 42pp; English.

The present invention describes a chimeric retrovirus envelope protein
(I) comprising an ecotropic envelope protein and a heterologous short
peptide ligand inserted within the ecotropic envelope protein. Also
described: (1) a nucleic acid molecule comprising a sequence encoding the
recombinant chimeric envelope protein; (2) a vector comprising a nucleic
acid sequence encoding the chimeric envelope protein; (3) a recombinant
retroviral particle comprising a chimeric envelope protein comprising a
heterologous short peptide ligand; (3) altering retroviral tropism; (4)
identifying a nucleic acid sequence encoding the chimeric envelope
protein that alters viral tropism; (5) delivering a nucleic acid sequence
to a cell; and (6) treating cancer. (1) has cytostatic activity and can
be used in gene therapy. The chimeric retrovirus envelope protein is
useful for treating cancer, which comprises providing a cancer cell, e.g.
human cancer cell and infecting the cancer cell with a virus, e.g.
retrovirus comprising the chimeric envelope protein comprising a
heterologous short peptide ligand and a therapeutically useful gene, e.g.
encoding thymidine kinase. The present sequence represents an
erythropoietin receptor/erythropoietin consensus peptide, which is given
in the exemplification of the present invention.

XX Novel thrombopoietin mimetic peptides which bind to mpl receptor, and
PT which stimulate the production of platelets and/or the production of
PT platelet precursors, useful for treating thrombocytopenia.
XX
XX Disclosure; SEQ ID NO 1; 126pp; English.
XX
XX The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that
XX binds to the c-mpl (mpl) receptor, and which stimulates the production of
XX platelets and/or the production of platelet precursors, is new. Further
XX disclosed is a composition of matter (II) that binds to an mpl receptor,
XX and a pharmaceutical composition comprising (II) and a carrier. The
XX pharmaceutical composition of the invention is useful for treating
XX thrombocytopenia in an animal, and for increasing megakaryocytes or
XX platelets in a patient. The TMP of the invention is useful for treating
XX conditions involving a megakaryocyte and/or platelet deficiency, e.g.
XX disease conditions involving thrombocytopenia such as aplastic anaemia,
XX autoimmune thrombocytopenia, drug induced immune thrombocytopenia,
XX autoimmune haemolytic anaemia, Hughes's syndrome and lupoid
XX thrombocytopenia. The TMP of the invention is also useful for
XX maintaining the viability or storage life of platelets and/or
XX megakaryocytes and its derived cells. The compounds demonstrate an
XX improved ability to bind to and/or trigger transmembrane signal through,
XX i.e. activating, the mpl receptor the compounds have superior
XX thrombopoietic activity, i.e. the ability to stimulate, in vivo and in
XX vitro, the production of platelets and/or megakaryocytic activity,
XX i.e. the ability to stimulate, in vivo and in vitro, the production of
XX platelet precursors. Further, certain of the compounds also exhibit
XX superior therapeutic properties, such as improved plasma half-life,
XX biological activity and in vivo circulation time. The current sequence
XX represents a TMP of the invention.

 XX Increasing hematopoietic stem cell production in subject, useful in
 PT reducing the incidence of delayed primary engraftment, comprises
 PT administering a Thrombopoietin mimetic compound e.g., a peptide to a
 PT subject.
 XX Disclosure; Fig 2; 32pp; English.
 PS The invention relates to a method (M1) for increasing haematopoietic stem
 CC cell production in a subject which involves administering a
 CC Thrombopoietin (TPO) mimetic compound to the subject. Also included is
 CC another method (M2) of providing haematopoietic stem cells to a subject
 CC which involves administering a TPO mimetic compound to a subject to
 CC enhance expansion of a stem cell population within bone marrow and/or
 CC mobilize stem cells in peripheral circulation, harvesting one or more of
 CC the bone marrow stem cells or the stem cells in the peripheral
 CC circulation, and transplanting the harvested stem cells into the subject.
 CC A method (M3) is also provided for reducing a time to engraftment
 CC following reinfusion of stem cells in a subject, involves administering a
 CC TPO mimetic compound to the subject, enhancing the expansion of the stem
 CC cell population within bone marrow and/or mobilizing the stem cells in
 CC peripheral circulation, harvesting one or more of the bone marrow stem
 CC cells or one or more of the stem cells in the peripheral circulation, and
 CC transplanting the one or more harvested stem cells into the subject. TPO
 CC mimetic compounds are disclosed as peptides, including cyclic or modified
 CC peptides. (M1) is useful for increasing haematopoietic stem cell
 CC production in a subject e.g., human. (M3) is useful for reducing time to
 CC engraftment following reinfusion of stem cells, reducing the incidence of
 CC delayed primary engraftment, reducing the time of platelet and/or
 CC neutrophil engraftment following reinfusion of stem cells in a subject.
 CC (M1) is also useful for increasing the number of stem cells from a donor
 CC whose cells are then used for rescue of recipient subject. Also useful in
 CC the treatment of thrombocytopenia. (M1) enables transplantation to
 CC proceed in patients who would not otherwise be considered as candidates
 CC because of unacceptably high risk of failed engraftment, reduces the
 CC number of aphereses required to generate a minimum acceptable harvest,
 CC reduces the incidence of primary and secondary failure of engraftment by
 CC increasing the number of haematopoietic stem cells (HSCs) available for
 CC transplantation and reduces the time required for primary engraftment.
 CC The present sequence represents an example of TPO mimetic peptide
 CC fragment.

 CC portion of a two complementarity determining regions (CDRs) are replaced
 CC with a peptide mimetic selected from an erythropoietin (EPO) mimetic and
 CC a thrombopoietin (TPO) mimetic. An immunoglobulin molecule of the
 CC invention has immunosuppressive activity, and may have a use in
 CC immunotherapy. The immunoglobulin molecule is useful for diagnosing or
 CC treating thrombocytopenia as a result of chemotherapy, bone marrow
 CC transplantation, or chronic diseases such as idiopathic thrombocytopenia.
 CC The present sequence represents a TPO mimetic peptide.

XX
XX New nitrogen containing integrin targeting compounds are integrin alpha-v
PT beta-3 antagonists useful for the treatment or prevention of e.g. bone
PT metabolism, inflammation, cancer and cell growth.
XX
XX Example 7; SEQ ID NO 5; 182pp; English.
XX
XX This invention relates to novel nitrogen containing integrin targeting
CC compounds, their stereoisomers, tautomers or salts thereof. Specifically,
CC it refers to integrin targeting compounds that comprise small MW, RGD
CC peptidomimetic integrin targeting agent-linker conjugates that are linked
CC to polymers such as a protein. The present invention describes compounds
CC that can be useful for the treatment or prevention of diseases that
CC involve integrin-alpha, and can be used to treat a defect in
CC angiogenesis, bone metabolism, inflammation, cancer or cell growth.
CC Accordingly, they exhibit antiangiogenic, osteopathic, antiinflammatory
CC and cytostatic activities. This peptide sequence is a TPO mimetic peptide
CC given in an exemplification of the invention.

XX
XX New peptide-based compound comprising a peptide moiety, a spacer moiety
PT and a water-soluble polymer moiety useful as pharmaceuticals.
XX
XX Example 15; Page 46; 57pp; English.
XX
XX The invention relates to a peptide-based compound (I) comprising a
CC peptide moiety, a spacer moiety and a water-soluble polymer moiety (e.g.
CC polyethylene glycol, PEG). Also included is a pharmaceutical composition
CC comprising (I) and one or more pharmaceutically acceptable diluents,
CC preservatives, solubilizers, emulsifiers, adjuvants and/or carriers. The
CC peptide moiety comprises one or more peptides that bind to erythropoietin
CC -receptors or thrombopoietin-receptors. The peptide based compound is
CC useful as a pharmaceutical. The peptide moiety particularly
CC erythropoietin receptors are essential in the process of red blood cell
CC formation and has useful applications in both diagnosis and the treatment
CC of blood disorders characterized by low or defective red blood cell
CC production. The peptide based compound has improved antigenicity and
CC durability. Polyethylene glycolylation leads to improved drug efficacy and
CC safety, increases bioavailability and decreases immunogenicity and dosing
CC frequency. The present sequence is a thrombopoietin-receptor modulating
CC peptide.

PT replaced with a peptide mimetic, useful for treating, e.g. HIV-infected
PT patients.
XX
XX Claim 8; SEQ ID NO 1; 139pp; English.
XX
XX The invention describes an immunoglobulin molecule or its fragment
XX comprising a region where amino acid residues corresponding to at least
XX a portion of two CDRs are replaced with a peptide mimetic selected from
XX an EPO mimetic or a TPO mimetic, or a region where amino acid residues
XX corresponding to at least a portion of a CDR is replaced by a peptide
XX mimetic including SEQ ID NO. 126 (not defined in the specification),
XX where X at each occurrence represents any amino acid. Also described are:
XX a nucleic acid encoding an immunoglobulin molecule or its fragment; an
XX expression vector comprising the nucleic acid of (1); a host cell
XX transformed with the expression vector of (2); producing an

CC immunoglobulin molecule or its fragment; and a composition comprising the
CC immunoglobulin or its fragment and a pharmaceutical carrier. Also
CC disclosed are: engineering immunoglobulin molecules or fragments;
CC creation of a library of monoclonal antibodies; stimulating
CC proliferation, differentiation, or growth of megakaryocytes; and
CC activating a homodimeric receptor protein. The immunoglobulin molecules
CC are useful for treating HIV-infected patients, patients undergoing
CC chemotherapy, bone marrow transplant patients, stem cell transplant
CC patients, or patients suffering from myeloproliferative disorders. This
CC is the amino acid sequence of an agonist TPO mimetic peptide used to
CC replace a CDR in a rationally designed antibody.

XX New immunoglobulin molecule comprising a region where amino acid residues
PT corresponding to at least a portion of a complementarity determining
PT region is replaced with a peptide, for treating congestive heart failure,
PT diabetes or obesity.
XX
XX Example 1; SEQ ID NO 1; 152pp; English.
XX
XX The invention relates to an immunoglobulin (Ig) molecule or its fragment
XX comprising a region where amino acid residues corresponding to at least a
XX portion of a complementarity determining regions (CDR) is replaced with a
XX peptide selected from human brain natriuretic protein (hBNP), hBNP
XX mimetics, glycogen phosphorylase (GLP)-1, GLP-1 mimetics, GLP-2, GLP-2
XX mimetics, exendin, exendin mimetics, glucagons, glucagon mimetics and
XX PACAP-38. Also included are a nucleic acid encoding the immunoglobulin
XX molecule, an expression vector comprising the nucleic acid, a host cell
XX transformed with the expression vector, producing an immunoglobulin
XX molecule (or its fragment, comprising the host cell under
XX conditions suitable for expression of the immunoglobulin or its
XX fragment), a composition comprising an immunoglobulin (or its fragment)
XX and a pharmaceutically acceptable carrier, treating congestive heart

CC failure (comprising administering to the subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a peptide
CC selected from hBMP and hBMP mimetics), treating diabetes or obesity
CC (comprising administering to a subject an immunoglobulin molecule or its
CC fragment comprising a region where amino acid residues corresponding to
CC at least a portion of a CDR is replaced with a peptide selected from GLP-
CC 1, GLP-1 mimetics, GLP-2, GLP-2 mimetics, exendin, exendin mimetics,
CC glucagons, glucagon mimetics and PACAP-38), preserving/improving beta-
CC cell function (comprising administering to a subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with GLP-1),
CC inducing endothelial-dependent relaxation of precontracted pulmonary
CC artery rings (comprising administering to a subject an immunoglobulin
CC molecule or fragment thereof comprising a region where amino acid
CC residues corresponding to at least a portion of a CDR is replaced with
CC GLP-1) and administering to a subject an immunoglobulin molecule or its
CC fragment (comprising a region where amino acid residues corresponding to
CC at least a portion of a complementarity determining regions (CDR) is
CC replaced with a thiazolidinedione derivative), regulating adiponectin
CC expression (comprising administering to a subject an immunoglobulin
CC molecule or its fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a
CC thiazolidinedione derivative). The immunoglobulin is an anti-tetanus
CC toxoid antibody (TT) where the heavy chain CDR2 and/or CDR3 are fully or
CC partially replaced with a peptide listed above or (as described in the
CC examples) a thrombopoietin (TPO) mimetic, erythropoietin (EPO) mimetic
CC or ANP (atrial natriuretic peptide). The molecule, composition and
CC methods are useful for treating congestive heart failure, diabetes or
CC obesity. The present sequence is a TPO mimetic peptide (full length, core
CC or flanked by random amino acids) for inclusion in an immunoglobulin of
CC the invention.

PS Claim 2; Page 60; 78pp; English.
 XX
 CC The invention relates to peptide compounds composed of two peptide chains
 CC attached to each of the amino groups of a single lys in the amide form.
 CC The compounds are of formula (Pep1)(Pep2)K(NH2), where Pep1 is of
 CC formula: X1-I-E-X2-P-T-L-X3-X4-X5-L-X6-X7-X8-X9-X10; and pep2 is of
 CC formula: X1-I-E-X2-P-T-L-X3-X4-X5-L-X6-X7-X8-X9'-X10'. X1 = H or acyl; X2
 CC = Gly or Sar (sarcosine); X3 = Arg, Ala, Nle (norleucine) or N-Phe; X6 =
 CC acetyllysine; X4 = Gln or Glu; X5 = Trp, L-1-naphthylalanine or Phe; X6 =
 CC Ala, 5-aminopentanoic acid or 2-aminobutyric acid; X7 = Ala,
 CC diphenylalanine, or is absent; X8 = Arg, p- amino-phenylalanine, N-
 CC acetyl-lysine, or is absent; X9, X9' = Ala, beta Ala, N-methyl-alanine,
 CC Sar, or is absent; X10, X10' = beta Ala or is absent. The new peptides
 CC are capable of binding to, and activating, the thrombopoietin (TPO)
 CC receptor. They may be used in vitro as tools for understanding the
 CC biological role of TPO. They may be used as competitive binders in assays
 CC to screen for new TPO receptor agonists. They may be used as reagents for
 CC detecting TPO receptors in living cells, biological fluids, etc. They may
 CC be used to maintain growth and proliferation of TPO-dependent cells and
 CC for in vitro expansion of megakaryocytes. They may be used to activate
 CC TPO receptors in vivo, e.g., to treat blood disorders or
 CC thrombocytopenia associated with bone marrow transfusions, radiotherapy
 CC or chemotherapy. The present sequence represents a specific example of
 CC (Pep1)K(NH2)

XX CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
 CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
 CC of activating thrombopoietin receptors in cells comprise contacting the
 CC cells with effective amounts of peptides and peptide mimetics attached to
 CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
 CC as that due to chemotherapy, radiation therapy or bone-marrow
 CC transplantation and to prevent thrombocytopenia in patients at risk. The
 CC sequences are used to prevent and prevent haematological disorders
 CC including thrombocytopenia and platelet disorders. They are used in vitro
 CC as unique tools for understanding the biological role of thrombopoietin

CC (TPO) and to develop other compounds that bind to and activate the TPO
 CC receptor. The peptides can be used to detect TPO receptors on living
 CC cells and fixed cells, in biological fluids, in tissue homogenates, and
 CC in purified or natural biological materials. They may also be used for in
 CC situ staining, fluorescence-activated cell sorting, Western blotting and
 CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
 CC be used for in vitro expansion of megakaryocytes and their committed
 CC progenitors alone or in conjunction with additional cytokines

XX PT A novel immunogen molecule comprising a region in which amino acid
 PT residues corresponding to at least a portion of the complementary
 PT determining region are replaced or fused with an erythropoietin or
 PT thrombopoietin mimetic.

XX PS Claim 19; Page 6; 113pp; English.

XX CC The present invention describes an immunoglobulin molecule or its fragment
 CC (I) comprising a region where amino acid residues corresponding to at
 CC least a portion of the complementary determining region (CDR) are
 CC replaced or fused with biologically active peptides e.g. a peptide
 CC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic,
 CC that is flanked with proline at its carboxy terminus. (I) has
 CC antianaemic, haemostatic and nephrotropic activities, and can be used as
 CC a stimulator of proliferation, differentiation and maturation of
 CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
 CC for stimulating proliferation, differentiation or growth of
 CC promegakaryocytes or megakaryocytes, where (I) is contacted with
 CC promegakaryocytes or megakaryocytes, which results in increased platelet

CC production. (I) with a region where amino acid residues corresponding to
 CC a portion of CDR is replaced with an EPO mimetic, or which has one or
 CC more of its CDRs fused to an EPO mimetic, is useful for increasing the
 CC production of red blood cells, where (I) is contacted with haematopoietic
 CC stem cells or their progenitors. (I) is useful for diagnostics or
 CC therapeutics, in cell isolation strategies, and for treating patients
 CC suffering from deficiency in cell populations caused by disease,
 CC disorders or treatments related to the suppression of haematopoiesis.
 CC ABQ73288 to ABQ73377 and ABP51669 to ABP51696 represent sequences used in

XX PT Antibody targeting compound useful e.g. for diagnostic immunoassays and
 PT treating microbial diseases comprises targeting or biological agent
 PT covalently linked to combining site of the antibody.

XX PS Example 7; Page 62; 56pp; English.

XX CC The present sequence is that of thrombopoietin (TPO) mimetic peptide
 CC AFI2505, modified to include an N-terminal Cys residue. AFI2505 mimics
 CC the activity of recombinant TPO. The invention provides antibody
 CC targeting compounds that are used to reprogram the specificity of an
 CC antibody. The antibody targeting compound is linked to the combining site
 CC of the antibody, such that the modified antibody takes on the binding
 CC specificity of the targeting agent. In an example from the invention, a
 CC TPO receptor targeting antibody compound was prepared by covalently
 CC linking Cys-modified peptide AFI2505 to aldolase monoclonal antibody 38C2
 CC using a maleimide-diketone linker. The resulting TPO receptor targeting
 CC antibody compound can be used to treat thrombocytopaenia resulting from
 CC chemotherapy and bone marrow transplantation

FT administering a Thrombopoietin mimetic compound e.g., a peptide to a
PT subject.
XX
XX Disclosure; Fig 2; 32pp; English.

The invention relates to a method (M1) for increasing haematopoietic stem cell production in a subject which involves administering a Thrombopoietin (TPO) mimetic compound to the subject. Also included is another method (M2) of providing haematopoietic stem cells to a subject which involves administering a TPO mimetic compound to a subject to enhance expansion of a stem cell population within bone marrow and/or mobilize stem cells in peripheral circulation, harvesting one or more of the bone marrow stem cells or the stem cells in the peripheral circulation, and transplanting the harvested stem cells into the subject. A method (M3) is also provided for reducing a time to engraftment following reinfusion of stem cells in a subject, involves administering a TPO mimetic compound to the subject, enhancing the expansion of the stem cell population within bone marrow and/or mobilizing the stem cells in peripheral circulation, harvesting one or more of the bone marrow stem cells or one or more of the stem cells in the peripheral circulation, and transplanting the one or more harvested stem cells into the subject. TPO mimetic compounds are disclosed as peptides, including cyclic or modified peptides. (M1) is useful for increasing haematopoietic stem cell production in a subject e.g., human. (M3) is useful for reducing time to engraftment following reinfusion of stem cells, reducing the incidence of delayed primary engraftment, reducing the incidence of secondary failure of platelet production and reducing the time of platelet and/or neutrophil engraftment following reinfusion of stem cells in a subject.

CC (M1) is also useful for increasing the number of stem cells from a donor whose cells are then used for rescue of recipient subject. Also useful in the treatment of thrombocytopenia. (M1) enables transplantation to proceed in patients who would not otherwise be considered as candidates because of unacceptably high risk of failed engraftment, reduces the number of aphereses required to generate a minimum acceptable harvest, reduces the incidence of primary and secondary failure of engraftment by increasing the number of haematopoietic stem cells (HSCs) available for transplantation and reduces the time required for primary engraftment. CC The present sequence represents an example of TPO mimetic peptide fragment.

 CC mobilize stem cells in peripheral circulation, harvesting one or more of
 CC the bone marrow stem cells or the stem cells in the peripheral
 CC circulation, and transplanting the harvested stem cells into the subject.
 CC A method (M3) is also provided for reducing a time to engraftment
 CC following reinfusion of stem cells in a subject, involves administering a
 CC TPO mimetic compound to the subject, enhancing the expansion of the stem
 CC cell population within bone marrow and/or mobilizing the stem cells in
 CC peripheral circulation, harvesting one or more of the bone marrow stem
 CC cells or one or more of the stem cells in the peripheral circulation, and
 CC transplanting the one or more harvested stem cells into the subject. TPO
 CC mimetic compounds are disclosed as peptides, including cyclic or modified
 CC peptides. (M1) is useful for increasing hematopoietic stem cell
 CC production in a subject e.g., human. (M3) is useful for reducing time to
 CC engraftment following reinfusion of stem cells, reducing the incidence of
 CC delayed primary engraftment, reducing the time of platelet and/or
 CC neutrophil engraftment following reinfusion of stem cells in a subject.
 CC (M1) is also useful for increasing the number of stem cells from a donor
 CC whose cells are then used for rescue of recipient subject. Also useful in
 CC the treatment of thrombocytopenia. (M1) enables transplantation to
 CC proceed in patients who would not otherwise be considered as candidates
 CC because of unacceptably high risk of failed engraftment, reduces the
 CC number of aphereses required to generate a minimum acceptable harvest,
 CC reduces the incidence of primary and secondary failure of engraftment by
 CC increasing the number of hematopoietic stem cells (HSCs) available for
 CC transplantation and reduces the time required for primary engraftment.

XX New immunoglobulin molecule comprising a region, where two
PT complementarity determining regions (CDRs) are replaced with EPO mimetic
or a TPO mimetic, useful for treating thrombocytopenia.

XX Disclosure; SEQ ID NO 2; 107pp; English.

XX The invention relates to a novel immunoglobulin molecule or its fragment
CC comprising a region where amino acid residues corresponding to at least a
CC portion of a two complementarity determining regions (CDRs) are replaced
CC with a peptide mimetic selected from an erythropoietin (EPO) mimetic and
CC a thrombopoietin (TPO) mimetic. An immunoglobulin molecule of the
CC invention has immunosuppressive activity, and may have a use in
CC immunotherapy. The immunoglobulin molecule is useful for diagnosing or
CC treating thrombocytopenia as a result of chemotherapy, bone marrow
CC transplantation, or chronic diseases such as idiopathic thrombocytopenia.

XX New nitrogen containing integrin targeting compounds are integrin alpha-v
PT beta-3 antagonists useful for the treatment or prevention of e.g. bone
PT metabolism, inflammation, cancer and cell growth.

XX Example 7; SEQ ID NO 6; 182pp; English.

XX This invention relates to novel nitrogen containing integrin targeting
CC compounds, their stereoisomers, tautomers or salts thereof. Specifically,
CC it refers to integrin targeting compounds that comprise small MW, RGD
CC peptidomimetic integrin targeting agent-linker conjugates that are linked
CC to polymers such as a protein. The present invention describes compounds

CC that can be useful for the treatment or prevention of diseases that
CC involve integrin-alpha, and can be used to treat a defect in
CC angiogenesis, bone metabolism, inflammation, cancer or cell growth.
CC Accordingly, they exhibit antiangiogenic, osteopathic, antiinflammatory
CC and cytostatic activities. This peptide sequence is a modified TPO
CC mimetic peptide with amino Cys given in an exemplification of the
CC invention.

PT New peptide-based compound comprising a peptide moiety, a spacer moiety
PT and a water-soluble polymer moiety useful as pharmaceuticals.
XX
PS Example 14; Page 43; 57pp; English.
XX
CC The invention relates to a peptide-based compound (I) comprising a
CC peptide moiety, a spacer moiety and a water-soluble polymer moiety (e.g.
CC polyethylene glycol, PEG). Also included is a pharmaceutical composition
CC comprising (I) and one or more pharmaceutically acceptable diluents,
CC preservatives, solubilizers, emulsifiers, adjuvants and/or carriers. The
CC peptide moiety comprises one or more peptides that bind to erythropoietin
CC -receptors or thrombopoietin-receptors. The peptide based compound is
CC useful as a pharmaceutical. The peptide moiety particularly
CC erythropoietin receptors are essential in the process of red blood cell
CC formation and has useful applications in both diagnosis and the treatment
CC of blood disorders characterized by low or defective red blood cell

CC production. The peptide based compound has improved antigenicity and
CC durability. Polyethylene glycolylation leads to improved drug efficacy and
CC safety, increases bioavailability and decreases immunogenicity and dosing
CC frequency. The present sequence is a thrombopoietin-receptor modulating
CC peptide.

DR New immunoglobulin molecule comprises a region where amino acid residues
PT corresponding to a portion of complementarity determining region (CDR) is
PT replaced with a peptide mimetic, useful for treating, e.g. HIV-infected
PT patients.
XX
PS Disclosure; SEQ ID NO 2; 139pp; English.
XX
CC The invention describes an immunoglobulin molecule or its fragment
CC comprising a region where amino acid residues corresponding to at least
CC a portion of two CDRs are replaced with a peptide mimetic selected from
CC an EPO mimetic or a TPO mimetic; or a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced by a peptide
CC mimetic including SEQ ID NO. 126 (not defined in the specification),
CC where X at each occurrence represents any amino acid. Also described are:
CC a nucleic acid encoding an immunoglobulin molecule or its fragment; an
CC expression vector comprising the nucleic acid of (1); a host cell
CC transformed with the expression vector of (2); producing an
CC immunoglobulin molecule or its fragment; and a composition comprising the
CC immunoglobulin or its fragment and a pharmaceutical carrier. Also
CC disclosed are: engineering immunoglobulin molecules or fragments;
CC creation of a library of monoclonal antibodies; stimulating
CC proliferation, differentiation, or growth of megakaryocytes; and
CC activating a homodimeric receptor protein. The immunoglobulin molecules
CC are useful for treating HIV-infected patients, patients undergoing
CC chemotherapy, bone marrow transplant patients, stem cell transplant
CC patients, or patients suffering from myeloproliferative disorders. This
CC is the amino acid sequence of an agonist TPO mimetic peptide used to
CC replace a CDR in a rationally designed antibody.

XX
CC The invention relates to an immunoglobulin (Ig) molecule or its fragment
CC comprising a region where amino acid residues corresponding to at least a
CC portion of a complementarity determining regions (CDR) is replaced with a
CC peptide selected from human brain natriuretic protein (hBNP), hBNP
CC mimetics, glycogen phosphorylase (GLP)-1, GLP-1 mimetics, GLP-2, GLP-2
CC mimetics, extendin, extendin mimetics, glucagons, glucagon mimetics and
CC PACAP-38. Also included are a nucleic acid encoding the immunoglobulin
CC molecule, an expression vector comprising the nucleic acid, a host cell
CC transformed with the expression vector, producing an immunoglobulin
CC molecule (or its fragment, comprising culturing the host cell under
CC conditions suitable for expression of the immunoglobulin or its
CC fragment), a composition comprising an immunoglobulin (or its fragment)
CC and a pharmaceutically acceptable carrier, treating congestive heart
CC failure (comprising administering to the subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a peptide
CC selected from hBNP and hBNP mimetics), treating diabetes or obesity
CC (comprising administering to a subject an immunoglobulin molecule or its
CC fragment comprising a region where amino acid residues corresponding to
CC at least a portion of a CDR is replaced with a peptide selected from GLP-
CC 1, GLP-1 mimetics, GLP-2, GLP-2 mimetics, extendin, extendin mimetics,
CC glucagons, glucagon mimetics and PACAP-38), preserving/improving beta-
CC cell function (comprising administering to a subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with GLP-1),
CC inducing endothelial-dependent relaxation of precontracted pulmonary
CC artery rings (comprising administering to a subject an immunoglobulin
CC molecule or fragment thereof comprising a region where amino acid
CC residues corresponding to at least a portion of a CDR is replaced with
CC GLP-1) and administering to a subject an immunoglobulin molecule or its
CC fragment (comprising a region where amino acid residues corresponding to

CC at least a portion of a complementarity determining regions (CDR) is
CC replaced with a thiazolidinedione derivative), regulating adiponectin
CC expression (comprising administering to a subject an immunoglobulin
CC molecule or its fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a
CC thiazolidinedione derivative). The immunoglobulin is an anti-tetanus
CC toxoid antibody (TT) where the heavy chain CDR2 and/or CDR3 are fully or
CC partially replaced with a peptide listed above or (as described in the
CC examples) a thrombopoietin (TPO) mimetic, erythropoietin (EPO) mimetic
CC or ANP (atrial natriuretic peptide). The molecule, composition and
CC methods are useful for treating congestive heart failure, diabetes or
CC obesity. The present sequence is a TPO mimetic peptide (full length, core
CC or flanked by random amino acids) for inclusion in an immunoglobulin of
CC the invention.

XX Thrombopoietin receptor-binding/activating peptide(s) and peptide
XX mimetic(s) - useful in treatment of haematological disorders, esp.
XX thrombocytopenia resulting from chemotherapy, etc.

PS Claim 30; Page 91; 106pp; English.

XX CC The present sequence is a compound which binds to thrombopoietin (TPO)
XX receptor (TR). It is part of a dimer linked by the omega amino acid to
XX the omega amino acid in the sequence in AAW09468. The compound can be
XX used for treating patients suffering from haematological disorders and
XX thrombocytopenia resulting from chemotherapy, radiation therapy or bone
XX marrow transfusions. The peptide may also be used to maintain the
XX proliferation and growth of TPO-dependent cell lines and for use in
XX biological research, for detecting TPO receptors on living cells

XX Peptides and peptide mimetics which bind to and activate the
XX thrombopoietin receptor - useful in treatment of haematological
XX disorders, esp. thrombocytopenia resulting from chemotherapy, etc.

XX Claim 30; Page 91; 106pp; English.

XX CC The present peptide binds the thrombopoietin receptor (TR), has a
XX molecular weight of less than 8000 Da and a TR binding affinity as
XX expressed by an IC50 of no more than about 100 microm. It can be used to
XX treat disorders which are susceptible to treatment with a thrombopoietin
XX agonist, preferably haematological disorders and thrombocytopenia

CC resulting from chemotherapy, radiation therapy or bone marrow
 CC transfusions. It can also be used diagnostically, e.g. to investigate the
 CC mechanism of thrombopoietin signal transduction and receptor activation,
 CC or to maintain the proliferation and growth of thrombopoietin dependent
 CC cell lines

CC -!- FUNCTION: Activates the carboxylate group of 2,3-dihydroxy-
CC benzoate (2,3-DHB) via ATP-dependent ppi exchange reactions, to
CC the acyladenylate. Then, catalyzes the acylation of holo-entB with
CC 2,3-DHB adenylate, preparing that molecule for amide bond
CC formation with L-serine (By similarity).
CC -!- CATALYTIC ACTIVITY: ATP + 2,3-dihydroxybenzoate = diphosphate +
CC (2,3-dihydroxybenzoyl)adenylate.
CC -!- CATALYTIC ACTIVITY: (2,3-dihydroxybenzoyl)adenylate + holo-entB =
CC adenosine 5'-monophosphate + acyl-holo-entB.
CC -!- PATHWAY: Siderophore biosynthesis; enterobactin biosynthesis.
CC -!- SUBUNIT: Proteins entB, entD, entE, and entF form a multienzyme
CC complex called enterobactin synthetase (By similarity).
CC -!- SIMILARITY: Belongs to the ATP-dependent AMP-binding enzyme
CC family. EntE subfamily.

RX MEDLINE=97361959; PubMed=9214294; DOI=10.1021/bi970453p;
RA Gehring A.M., Bradley K.A., Walsh C.T.;
RT "Enterobactin biosynthesis in Escherichia coli: isochorismate lyase
RT (EntB) is a bifunctional enzyme that is phosphopantetheinylated by
RT EntD and then acylated by EntE using ATP and 2,3-dihydroxybenzoate.";
RL Biochemistry 36:8495-8503(1997).
CC -!- FUNCTION: Activates the carboxylate group of 2,3-dihydroxy-
CC benzoate (2,3-DHB), via ATP-dependent ppi exchange reactions, to
CC the acyladenylate. Then, catalyzes the acylation of holo-entB with
CC 2,3-DHB adenylate, preparing that molecule for amide bond
CC formation with L-serine.
CC -!- CATALYTIC ACTIVITY: ATP + 2,3-dihydroxybenzoate = diphosphate +
CC (2,3-dihydroxybenzoyl)adenylate.
CC -!- CATALYTIC ACTIVITY: (2,3-dihydroxybenzoyl)adenylate + holo-entB =
CC adenosine 5'-monophosphate + acyl-holo-entB.
CC -!- PATHWAY: Siderophore biosynthesis; enterobactin biosynthesis.
CC -!- SUBUNIT: Proteins entB, entD, entE, and entF form a multienzyme
CC complex called enterobactin synthetase.
CC -!- INTERACTION:
CC P33371:dsuC; NbExp=1; IntAct=EBI-550322, EBI-562765;
CC P45523:fkpA; NbExp=1; IntAct=EBI-550322, EBI-550304;
CC -!- SIMILARITY: Belongs to the ATP-dependent AMP-binding enzyme
CC family. EntE subfamily.

CC -1- FUNCTION: During replicative cycle of retroviruses, the reverse-
CC transcribed viral DNA is integrated into the host chromosome by
CC the viral integrase enzyme. RNase H activity is associated with
CC the reverse transcriptase.
CC -1- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-
CC phosphomonoster.
CC -1- CATALYTIC ACTIVITY: Deoxynucleoside triphosphate + DNA(n) =
CC diphosphate + DNA(n+1).
CC -1- PFM: Cleavage sites that yield the mature proteins remain to be
CC determined.
CC -1- SIMILARITY: Belongs to the retroviruses Pol polyprotein family.
CC -1- SIMILARITY: Contains 1 integrase catalytic domain.
CC -1- SIMILARITY: Contains 1 integrase-type DNA-binding domain.
CC -1- SIMILARITY: Contains 1 integrase-type zinc finger.
CC -1- SIMILARITY: Contains 1 peptidase A2 domain.
CC -1- SIMILARITY: Contains 1 reverse transcriptase domain.
CC -1- SIMILARITY: Contains 1 RNase H domain.

 CC -!- FUNCTION: Early post-infection, the reverse transcriptase converts
 the viral RNA genome into double-stranded viral DNA. The RNase H
 domain of the reverse transcriptase performs two functions. It
 degrades the RNA template and specifically removes the RNA primer
 from the RNA/DNA hybrid. Following nuclear import, the integrase
 catalyzes the insertion of the linear, double-stranded viral DNA
 into the host cell chromosome. Endogenous Pol proteins may have
 kept, lost or modified their original function during evolution
 (By similarity).
 CC -!- SUBUNIT: Homodimer (By similarity).
 CC -!- DOMAIN: The LPQG and YXDD motifs are catalytically important and
 conserved among many retroviruses (By similarity).
 CC -!- SIMILARITY: Contains 1 reverse transcriptase domain.

CC domain of the reverse transcriptase performs two functions. It
CC degrades the RNA template and specifically removes the RNA primer
CC from the RNA/DNA hybrid. Following nuclear import, the integrase
CC catalyzes the insertion of the linear, double-stranded viral DNA
CC into the host cell chromosome. Endogenous Pol proteins may have
CC kept, lost or modified their original function during evolution
CC (By similarity).
CC -1- SUBUNIT: Homodimer (By similarity).
CC -1- DOMAIN: The LPOG and YXDD motifs are catalytically important and
CC conserved among many retroviruses (by similarity).
CC -1- SIMILARITY: Contains 1 reverse transcriptase domain.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Novel composition of matter comprising an Fc domain and pharmacologically
XX active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 210; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-P1-(X2)b, where: P1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linker; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to

 PT variable region comprising human framework or ligand binding region,
 PT useful for preparing a composition for treating e.g., immune,
 PT cardiovascular or neurologic disease.
 XX PS Disclosure; SEQ ID NO 477; 97pp; English.

XX CC This invention relates to novel mammalian CDR mimetibodies, specific
 CC portions or variants thereof. Specifically, it refers to an antibody
 CC fragment where a protein has been inserted into, or replaces a portion
 CC of, one or more CDR regions, such that each CDR mimetibody comprises at
 CC least one portion of a heavy chain or light chain variable region, which
 CC itself comprises at least one human framework region and at least one
 CC ligand binding region (LBR). The present invention describes human
 CC mimetibodies, including modified immunoglobulins and cleavage products
 CC that can be useful in gene therapy and the generation of transgenic
 CC plants and animals. Furthermore, the CDR mimetibody is useful for
 CC preparing compositions for modulating, treating or reducing the symptoms
 CC of immune, cardiovascular, infectious, malignant and/or neurologic
 CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
 CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
 CC peptide sequence is a TPO mimetic peptide sequence used to make a
 CC mimetibody of the invention.

 XX PT New CDR mimetibody comprising a portion of a heavy or light chain
 PT variable region comprising human framework or ligand binding region,
 PT useful for preparing a composition for treating e.g., immune,
 PT cardiovascular or neurologic disease.
 XX PS Disclosure; SEQ ID NO 479; 97pp; English.

XX CC This invention relates to novel mammalian CDR mimetibodies, specific
 CC portions or variants thereof. Specifically, it refers to an antibody
 CC fragment where a protein has been inserted into, or replaces a portion
 CC of, one or more CDR regions, such that each CDR mimetibody comprises at
 CC least one portion of a heavy chain or light chain variable region, which
 CC itself comprises at least one human framework region and at least one
 CC ligand binding region (LBR). The present invention describes human
 CC mimetibodies, including modified immunoglobulins and cleavage products
 CC that can be useful in gene therapy and the generation of transgenic
 CC plants and animals. Furthermore, the CDR mimetibody is useful for
 CC preparing compositions for modulating, treating or reducing the symptoms
 CC of immune, cardiovascular, infectious, malignant and/or neurologic
 CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
 CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
 CC peptide sequence is a TPO mimetic peptide sequence used to make a
 CC mimetibody of the invention.

XX New CH1 deleted mimetibody polypeptide and nucleic acid, useful for

CC diagnosing, preventing or treating cardiovascular, dermatologic,

CC endocrine, gastrointestinal, gynecologic, infectious, neurologic and

CC nutritional disorders.

XX Claim 14; SEQ ID NO 477; 123pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences

CC which encode them), compositions, methods and uses. The invention may be

CC useful for the development of compounds with an osteopathic,

CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,

CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,

CC immunomodulator, antiallergic, muscular-Gen, cytostatic,

CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or

CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-

CC modulator or cytokine-agonist. The methods and compositions of the

CC present invention are useful for the diagnosis, prevention and/or

CC treatment of diseases or conditions associated with aberrant expression

CC or activity of the CH1 deleted mimetibody, such as a bone or joint,

CC cardiovascular, dental or oral, dermatological, ear, nose or throat,

CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,

CC obstetric, haematologic, immunological, allergic, infectious,

CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,

CC pediatric, psychiatric, renal or pulmonary disorders. The present

CC sequence is that of a peptide which may be used during the creation of a

CC mimetibody of the invention.

 PT
 XX Disclosure; Col 15; 36pp; English.
 PS
 XX This sequence represents a thrombopoietin (TPO) receptor (TR) binding
 CC peptide of the invention. The peptide has: (i) a molecular weight below
 CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
 CC mM. The peptides are used to treat conditions requiring a thrombopoietin
 CC agonist, particularly haematological disorders or thrombocytopaenia,
 CC especially resulting from chemotherapy, radiation therapy or bone marrow
 CC transfusions. Also when labelled they may be used for diagnosis
 CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
 CC in vitro expansion of megakaryocytes and committed progenitor cells, and
 CC for the development/identification of other TR agonists. The compounds
 CC accelerate thrombocyte regeneration

 N-PSDB; AA242872.
 Novel secreted protein 5' expressed sequence tag sequences used in
 diagnostic, forensic, gene therapy, and chromosome mapping procedures.
 Claim 3; Page 779; 837pp; English.
 AA242265 to AA243075 represent novel 5' expressed sequence tag (EST)
 sequences, corresponding to human secreted proteins. AAY64651 to AAY65438
 represent the EST-related proteins corresponding to AA242265 to AA243052.
 The 5' ESTs can be used for producing secreted human gene products. They
 can be used to identify and isolate 5' untranslated regions (UTRs) and
 upstream regulatory regions which control the location, development
 stage, rate, and quantity of protein synthesis, as well as stability of
 mRNA. The ESTs are also useful as probes for chromosome mapping, and to
 obtain full length cDNA clones. The ESTs can also be used in forensic
 procedures to identify individuals, or in diagnostic procedures to
 identify individuals having genetic diseases resulting from abnormal gene
 expression. The products may also be used in gene therapy protocols. The
 nucleic acids encoding signal peptides can be used for directing
 extracellular secretion of a polypeptide or the insertion of a
 polypeptide into a membrane, or importing a polypeptide into a cell. The
 proteins encoded by the EST sequences may be useful in treating a variety
 of human conditions. Secreted proteins have therapeutic value, and the
 identification of new secreted proteins is valuable. AA242249 to AA242264
 and AAY64644 to AAY64650 represent sequences used in the exemplification
 of the present invention

XX New expressed sequence tags and encoded human proteins useful for
XX diagnosing, preventing or treating diseases such as autoimmune disorders,
XX inflammation, wounds or infections, or in forensic or chromosome mapping
XX procedures.
XX Example 15; SEQ ID NO 1419; 72pp; English.
XX The invention relates to an isolated or purified signal peptide
XX consisting of residues 1-16 of ADU7234 (signal peptide given separately
XX as ADU73026) which directs the extracellular secretion of a polypeptide
XX to which it is operably linked. The invention also relates to a method of
XX producing the signal peptide. The invention further discloses: isolated,
XX purified or enriched 5' expressed sequence tags (ESTs), many of which
XX encode all or a part of a secretory signal peptide; polypeptides encoded
XX by these ESTs (EST-related polypeptides); antibodies which recognize the
XX EST-related polypeptides; vectors and host cells comprising EST-related
XX nucleic acids of the invention; an array of ESTs; methods involving the
XX use of signal peptides of the invention to target polypeptides; and
XX methods involving the use of ESTs of the invention, for example, in
XX identifying a promoter in genomic DNA. The EST-encoded signal peptides of
XX the invention are useful for directing the secretion or import of a
XX recombinant polypeptide via the generation of protein fusions comprising
XX such signal peptides. The ESTs, EST-related polypeptides and methods of
XX the invention can be used for forensic procedures, chromosome mapping,
XX diagnostics, and therapeutic procedures, including gene therapy
XX Sequences ADU7215-ADU72919 represent incomplete polypeptides comprising
XX a signal peptide which are encoded by the 5' ESTs shown in ADU71427-
XX ADU72131. Note: The sequence data for this patent did not form part of

XX
XX Claim 25; SEQ ID NO 76274; 1766pp; English.
XX
XX The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX New polynucleotide from Lactobacillus rhamnosus HN001 strain, useful for
PT preparing a vaccine against bacterial infections or for modifying the
PT flavor, aroma or nutritional benefits of a bioactive or probiotic
PT supplement product.

XX PS Claim 21; SEQ ID NO 220; 54pp; English.

XX The present invention relates to the isolation of novel lactic acid
CC bacteria (Lactobacillus rhamnosus strain HN001) polynucleotide sequences,
CC and the proteins encoded by them. Also disclosed are oligonucleotide
CC probes and primers, and genetic constructs comprising the polynucleotide
CC sequences of the invention. The polynucleotide sequences are useful for
CC preparing a vaccine against bacterial infections or for improving the
CC properties of microbes used in the manufacture of milk-derived products,
CC food products, food additives, nutritional supplements, bioactive
CC substances or probiotic supplements, and for modifying the flavour,
CC aroma, texture and/or nutritional value of foods. They are also useful
CC for identifying microorganisms having a trait associated with the
CC polynucleotide. The present sequence represents a novel L. rhamnosus
CC polypeptide sequence of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification. The complete
CC sequence data for this patent was obtained in electronic format directly
CC from the USPTO web site at seqdata.uspto.gov.

XX New substantially purified *Myxococcus xanthus* nucleic acid molecule

PT encoding a nitrite reductase, useful for determining gene expression,

PT identifying mutations in a gene of interest, and for constructing

PT mutations in a gene of interest.

XX

XX Example 2; SEQ ID NO 16112; 25pp; English.

XX The invention relates to a substantially purified nucleic acid molecule

CC encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a

CC recombinant DNA construct for expression of a nitrite reductase gene in a

CC plant cell, and a plant cell comprising the recombinant DNA construct.

CC The nucleic acid is useful for determining gene expression, identifying

CC mutations in a gene of interest, and for constructing mutations in a gene

CC of interest. Sequences given in records for SEQ IDs 9692-16825 represent

CC a group of 7134 *Myxococcus xanthus* proteins and peptides. Note: The

CC sequence data for this patent did not form part of the printed

CC specification, but was obtained in electronic format directly from USPTO

XX

XX Novel composition of matter comprising an Fc domain and pharmacologically

PT active peptides, useful for treating cancer and autoimmune diseases.

XX

XX Claim 19; Page 207; 608pp; English.

XX

XX The present invention describes composition of matter (I) comprising an

CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:

CC

CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each

CC independently selected from -(L1)c-P1-(L2)d-P2, -(L1)c-P1-

CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,

CC P3, and P4 = are each independently sequences of pharmacologically active

CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,

CC c, d, e, and f = are each independently 0 or 1, provided that at least 1

CC of a and b is 1. The composition can have cytostatic, antiasthmatic,

CC thrombolytic and immunosuppressive activities. DNAs, vectors and host

CC cells from the present invention can be used for producing pharmaceutical

CC compositions. The compositions are useful for treating cancer, asthma,

CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than

CC a Fab domain) can provide a longer half-life or incorporate functions

CC such as Fc receptor binding, protein A binding, complement fixation, and

CC possibly placental transfer. AAM69443 to AAM69526 and AAB16955 to

CC AAB18003 represent nucleotide and amino acid sequences used in the

CC exemplification of the present invention

XX

XX Novel vehicle-peptide molecule or its multimers useful for treating

PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,

PT diabetic retinopathy, obesity, sleep disorders and infertility.

XX

XX Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
 CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
 CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
 CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
 CC neuroprotective activities. (I) can be used as a therapeutic or
 CC prophylactic agent as well as for screening purposes. (I) is useful for
 CC diagnosing diseases characterised by dysfunction of their associated
 CC protein of interest, for identifying normal or abnormal proteins of
 CC interest, as a part of diagnostic kit to detect the presence of their
 CC proteins of interest in a biological sample. Additionally, (I) is useful
 CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
 CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
 CC infertility, and neurological degenerative diseases. (I), comprising EPO-
 CC mimetic compounds are useful for treating disorders characterised by low
 CC red blood cell levels such as anaemia. The TPO-mimetic comprising
 CC compounds are useful for treating conditions that involve an existing
 CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
 CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic
 CC tumour which result in thrombocytopenia, systemic lupus erythematosus,
 CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX New thrombopoietin synthebodies, useful for stimulating proliferation,
 PT growth, or differentiation of hematopoietic cells, for treating or
 PT preventing hematopoietic or immune disorders, e.g. thrombocytopenia.

XX Disclosure; Page 11; 97pp; English.

XX The invention discloses a variant of an immunoglobulin (Ig) variable
 CC heavy or light chain domain that comprises at least one complementarity
 CC determining region (CDR) and framework regions flanking the CDR. The CDR
 CC also has added or substituted to it, at least one binding sequence which
 CC is heterologous to the CDR and is an antigenic, agonistic sequence from a
 CC thrombopoietin (TPO) receptor binding sequence. The antigenic sequence
 CC can be a binding sequence heterologous to the CDR, a cytotoxic T-
 CC lymphocyte (CTL)-epitope sequence, a T-helper cell sequence, a B-helper
 CC cell sequence or a combination of each. The variant or thrombopoietin
 CC synthebody, pharmaceutical and vaccine compositions are useful for
 CC stimulating proliferation, growth or differentiation of haematopoietic
 CC cells, particularly platelet progenitor cells. The variants are also
 CC useful for treating or preventing haematopoietic or immune disorders
 CC resulting from chemotherapy, radiation therapy, or bone marrow
 CC transfusions (e.g. thrombocytopenia or disseminated intravascular
 CC coagulation). Compositions comprising the synthebodies can be used for
 CC the mobilisation, amplification and ex vivo expansion of stem cells and
 CC committed precursor cells for autologous and allogeneic transplantation
 CC as well as for the expansion of stem cells for gene therapy. They are
 CC also useful as diagnostic or analytical reagents for studying the
 CC function of thrombopoietin and its receptor in vivo or in vitro. The
 CC sequence presented is the TPO receptor (MPL) agonist peptide consensus
 CC sequence #1

 PT New CDR mimetibody comprising a portion of a heavy or light chain
 PT variable region comprising human framework or ligand binding region,
 PT useful for preparing a composition for treating e.g., immune,
 PT cardiovascular or neurologic disease.
 XX
 XX Disclosure; SEQ ID NO 468; 97pp; English.
 XX
 CC This invention relates to novel mammalian CDR mimetibodies, specific
 CC portions or variants thereof. Specifically, it refers to an antibody
 CC fragment where a protein has been inserted into, or replaces a portion
 CC of, one or more CDR regions, such that each CDR mimetibody comprises at
 CC least one portion of a heavy chain or light chain variable region, which
 CC itself comprises at least one human framework region and at least one
 CC ligand binding region (LBR). The present invention describes human
 CC mimetibodies, including modified immunoglobulins and cleavage products
 CC that can be useful in gene therapy and the generation of transgenic
 CC plants and animals. Furthermore, the CDR mimetibody is useful for
 CC preparing compositions for modulating, treating or reducing the symptoms
 CC of immune, cardiovascular, infectious, malignant and/or neurologic
 CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
 CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
 CC peptide sequence is a TPO mimetic peptide sequence used to make a
 CC mimetibody of the invention.

 XX This invention relates to CHI deleted mimetibodies (and the DNA sequences
 CC which encode them), compositions, methods and uses. The invention may be
 CC useful for the development of compounds with an immunosuppressive,
 CC cardiovascular, cardiant, hypotensive, neuroprotective, nontropic,
 CC antibacterial, virucide or fungicide activity. In addition, the disclosed
 CC sequences may prove useful for gene therapy. The CHI-deleted mimetibody
 CC is useful for diagnosing or treating a disease condition in a cell,
 CC tissue, organ or animal, specifically for modulating, treating,
 CC alleviating, preventing the incidence or reducing the symptoms of an
 CC immune, cardiovascular (for example arrhythmia, hypertension or heart
 CC failure), or neurodegenerative (for example multiple sclerosis, dementia
 CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
 CC conditions, or infectious diseases (for example bacterial, viral or
 CC fungal infection). The present sequence is that of a peptide which may be
 CC used during the creation of a mimetibody of the invention.

XX Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.

XX Claim 19; Page 208; 608pp; English.

XX The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1

CC of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAB69443 to AAB69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.

XX Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cycostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianemic, anorectic, antiinfertility, haemostatic, dermatological and neuroprotective activities. (I) can be used as a therapeutic or

CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (II), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

XX New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.

XX Disclosure; SEQ ID NO 472; 97pp; English.

XX This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one

CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/or neurological
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX Claim 2; SEQ ID NO 472; 129pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,

CC alleviating, preventing the incidence or reducing the symptoms of an
 CC immune, cardiovascular (for example arrhythmia, hypertension or heart
 CC failure), or neurodegenerative (for example multiple sclerosis, dementia
 CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
 CC conditions, or infectious diseases (for example bacterial, viral or
 CC fungal infection). The present sequence is that of a peptide which may be
 CC used during the creation of a mimetibody of the invention.

Identifying a compound that modulates cell cycle arrest, useful for developing therapeutic reagents for treating cancer comprising contacting a cell comprising a target polypeptide with the compound.

Disclosure; Fig 23; 180pp; English.

The present invention describes a method for identifying a compound (C) that modulates cell cycle arrest. The method comprises contacting a cell comprising a target polypeptide with the compound (C), where the target polypeptide encoded by the complement of a nucleic acid that hybridizes under stringent conditions to a nucleic acid encoding a polypeptide having an amino acid sequence selected from 18 148-1408 amino acid sequences (SEQ ID NO: 2-36, even numbers only). Also described: (1) modulating cell cycle arrest in a subject; (2) a CK2-specific short interfering RNA (siRNA) molecule comprising the sequence: (I) AACATGGAATTAGATCCACGT, where the siRNA molecule is from 21-30 nucleotide base pairs in length; (3) inhibiting expression of a CK2 gene in a cell; (4) a PIM1-specific siRNA molecule comprising the sequence: (II) AAAACTCCGAGTGAAGTGC, where the siRNA molecule is from 21-30 nucleotide base pairs in length; (5) inhibiting expression of a PIM1 gene in a cell; (6) an Hb01-specific siRNA molecule comprising the sequence: (III) AACTGAGCAAGTGGTGGATT, where the siRNA molecule is from 21-30 nucleotide base pairs in length; and (7) inhibiting expression of an Hb01 gene in a cell. (C) has cytostatic activity, and can be used in gene therapy. The method is useful for identifying a compound (c) that modulates cell cycle arrest. Compounds that modulate cell cycle arrest are useful for developing therapeutic reagents for treating cancer and other proliferative disorders. The present sequence represents a dominant

CC negative mutant of human CDC7L1, which is used in the exemplification of the present invention.

XX New antisense nucleic acids, useful for identifying proteins or screening
XX for homologous nucleic acids required for cellular proliferation to
XX isolate candidate molecules for rational drug discovery programs.
XX Claim 25; SEQ ID NO 50862; 1766pp; English.
XX The invention relates to an isolated nucleic acid comprising any one of
XX the 6213 antisense sequences given in the specification where expression
XX of the nucleic acid inhibits proliferation of a cell. Also included are:
XX (1) a vector comprising a promoter operably linked to the nucleic acid.

CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC the gene product or that has an activity against a biological pathway; (8)
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this

CC -!- FUNCTION: Removal of H(2)O(2), oxidation of toxic reductants,
CC biosynthesis and degradation of lignin, suberization, auxin
CC catabolism, response to environmental stresses such as wounding,
CC pathogen attack and oxidative stress. These functions might be
CC dependent on each isozyme/isoform in each plant tissue.
CC -!- CATALYTIC ACTIVITY: Donor + H(2)O(2) = oxidized donor + 2 H(2)O.
CC -!- COFACTOR: Binds 2 calcium ions per subunit.
CC -!- COFACTOR: Binds 1 heme B (iron-protophyrin IX) group per
CC subunit.
CC -!- SUBCELLULAR LOCATION: Secreted (By similarity).
CC -!- SIMILARITY: Belongs to the peroxidase family. Classical plant
CC (class III) peroxidase subfamily.

XX Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.

XX Claim 19; Page 207; 608pp; English.

XX The present invention describes composition of matter (I) comprising an

CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-P1-(X2)b, where: P1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAG69443 to AAG69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
XX diabetic retinopathy, obesity, sleep disorders and infertility.

PT Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its

CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,

CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,

CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and

CC neuroprotective activities. (I) can be used as a therapeutic or

CC prophylactic agent as well as for screening purposes. (I) is useful for

CC diagnosing diseases characterised by dysfunction of their associated

CC protein of interest, for identifying normal or abnormal proteins of

CC interest, as a part of diagnostic kit to detect the presence of their

CC proteins of interest in a biological sample. Additionally, (I) is useful

CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,

CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-

CC mimetic compounds are useful for treating disorders characterised by low

CC red blood cell levels such as anaemia. The TPO-mimetic comprising

CC compounds are useful for treating conditions that involve an existing

CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet

CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic

CC tumour which result in thrombocytopenia, systemic lupus erythematosus,

CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX New thrombopoietin synthebodies, useful for stimulating proliferation,

PT growth, or differentiation of hematopoietic cells, for treating or

PT

PT preventing hematopoietic or immune disorders, e.g. thrombocytopenia.

XX Disclosure; Page 11; 97pp; English.

XX The invention discloses a variant of an immunoglobulin (Ig) variable

CC heavy or light chain domain that comprises at least one complementarity

CC determining region (CDR) and framework regions flanking the CDR. The CDR

CC also has added or substituted to it, at least one binding sequence which

CC is heterologous to the CDR and is an antigenic, agonistic sequence from a

CC thrombopoietin (TPO) receptor binding sequence. The antigenic sequence

CC can be a binding sequence heterologous to the CDR, a cytotoxic T-

CC lymphocyte (CTL)-epitope sequence, a T-helper cell sequence, a B-helper

CC cell sequence or a combination of each. The variant or thrombopoietin

CC synthebody, pharmaceutical and vaccine compositions are useful for

CC stimulating proliferation, growth or differentiation of haematopoietic

CC cells, particularly platelet progenitor cells. The variants are also

CC useful for treating or preventing haematopoietic or immune disorders

CC resulting from chemotherapy, radiation therapy, or bone marrow

CC transfusions (e.g. thrombocytopenia or disseminated intravascular

CC coagulation). Compositions comprising the synthebodies can be used for

CC the mobilisation, amplification and ex vivo expansion of stem cells and

CC committed precursor cells for autologous and allogeneic transplantation

CC as well as for the expansion of stem cells for gene therapy. They are

CC also useful as diagnostic or analytical reagents for studying the

CC function of thrombopoietin and its receptor in vivo or in vitro. The

CC sequence presented is the TPO receptor (MPL) agonist peptide consensus

CC sequence #2

XX New CDR mimetibody comprising a portion of a heavy or light chain

PT variable region comprising human framework or ligand binding region,

PT useful for preparing a composition for treating e.g., immune,

PT cardiovascular or neurologic disease.

PS Disclosure, SEQ ID NO 469; 97pp; English.

XX

XX This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one CDR region. The present invention describes human CDR mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulatory, cardiant, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is a TPO mimetic peptide sequence used to make a mimetibody of the invention.

XX

XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for modulating, treating, alleviating, preventing an immune, cardiovascular, or neurodegenerative disease or disorder, anemia, cancer, or infectious diseases.

XX

PS Claim 2; SEQ ID NO 469; 129pp; English.

XX

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, notropic, antibacterial, virucide or fungicide activity. In addition, the disclosed sequences may prove useful for gene therapy. The CH1-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, alleviating, preventing the incidence or reducing the symptoms of an immune, cardiovascular (for example arrhythmia, hypertension or heart failure), or neurodegenerative (for example multiple sclerosis, dementia or Alzheimer's disease) diseases or disorders, anaemia, cancerous conditions, or infectious diseases (for example bacterial, viral or fungal infection). The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.

PT New CHI deleted mimetibody polypeptide and nucleic acid, useful for
 PT diagnosing, preventing or treating cardiovascular, dermatologic, and
 PT endocrine, gastrointestinal, gynecologic, infectious, neurologic and
 PT nutritional disorders.
 XX
 PS Claim 14; SEQ ID NO 469; 123pp; English.
 XX
 CC This invention relates to CHI deleted mimetibodies (and the DNA sequences
 CC which encode them), compositions, methods and uses. The invention may be
 CC useful for the development of compounds with an osteopathic,
 CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
 CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
 CC immunomodulator, antiallergic, muscular-Gen, cytostatic,
 CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or
 CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
 CC modulator or cytokine-agonist. The methods and compositions of the
 CC present invention are useful for the diagnosis, prevention and/or
 CC treatment of diseases or conditions associated with aberrant expression
 CC or activity of the CHI deleted mimetibody, such as a bone or joint,
 CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
 CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
 CC obstetric, haematologic, immunological, allergic, infectious,
 CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
 CC pediatric, psychiatric, renal or pulmonary disorders. The present
 CC sequence is that of a peptide which may be used during the creation of a
 CC mimetibody of the invention.

XX
 XX New CDR mimetibody comprising a portion of a heavy or light chain
 PT variable region comprising human framework or ligand binding region,
 PT useful for preparing a composition for treating e.g., immune,
 PT cardiovascular or neurologic disease.

XX Disclosure; SEQ ID NO 494; 97pp; English.
 PS
 CC This invention relates to novel mammalian CDR mimetibodies, specific
 CC portions or variants thereof. Specifically, it refers to an antibody
 CC fragment where a protein has been inserted into, or replaces a portion
 CC of, one or more CDR regions, such that each CDR mimetibody comprises at
 CC least one portion of a heavy chain or light chain variable region, which
 CC itself comprises at least one human framework region and at least one
 CC ligand binding region (LBR). The present invention describes human
 CC mimetibodies, including modified immunoglobulins and cleavage products
 CC that can be useful in gene therapy and the generation of transgenic
 CC plants and animals. Furthermore, the CDR mimetibody is useful for
 CC preparing compositions for modulating, treating or reducing the symptoms
 CC of immune, cardiovascular, infectious, malignant and/or neurologic
 CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
 CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
 CC peptide sequence is a TPO mimetic peptide sequence used to make a
 CC mimetibody of the invention.

XX Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.
XX Claim 19; Page 214; 608pp; English.

XX The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical

CC compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAG69443 to AAG69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

XX Activating thrombopoietin receptors in cells, used to treat thrombocytopenia and hematological disorders, comprises contacting cells with peptides and peptide mimetics attached to hydrophilic polymers.
XX Disclosure; Col 19; 128pp; English.

XX Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that bind to and activate the human thrombopoietin receptor (TPO-R). Methods of activating thrombopoietin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders including thrombocytopenia and platelet disorders. They are used in vitro as unique tools for understanding the biological role of thrombopoietin

CC (TPO) and to develop other compounds that bind to and activate the TPO
 CC receptor. The peptides can be used to detect TPO receptors on living
 CC cells and fixed cells, in biological fluids, in tissue homogenates, and
 CC in purified or natural biological materials. They may also be used for in
 CC situ staining, fluorescence-activated cell sorting, Western blotting and
 CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
 CC be used for in vitro expansion of megakaryocytes and their committed
 CC progenitors alone or in conjunction with additional cytokines

XX Novel vehicle-peptide molecule or its multimers useful for treating
 XX inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
 XX diabetic retinopathy, obesity, sleep disorders and infertility.

XX Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
 CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
 CC cytostatic, antirheumatic, antiarthritis, antidiabetic, ophthalmological,
 CC antianemic, anorectic, antiinfertility, haemostatic, dermatological and
 CC neuroprotective activities. (I) can be used as a therapeutic or
 CC prophylactic agent as well as for screening purposes. (I) is useful for

CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (II), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX Claim 2; SEQ ID NO 491; 129pp; English.

XX PS This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX PF Novel composition of matter comprising an Fc domain and pharmacologically
XX PT active peptides, useful for treating cancer and autoimmune diseases.
XX PS Claim 19; Page 214; 608pp; English.
XX CC The present invention describes composition of matter (I) comprising an
XX CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
XX CC (X1)a-P1-(X2)b, where: P1 = an Fc domain; X1 and X2 = are each
XX CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
XX CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
XX CC P3, and P4 = are each independently sequences of pharmacologically active
XX CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
XX CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
XX CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
XX CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
XX CC cells from the present invention can be used for producing pharmaceutical
XX CC compositions. The compositions are useful for treating cancer, asthma,
XX CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
XX CC a Fab domain) can provide a longer half-life or incorporate functions
XX CC such as Fc receptor binding, protein A binding, complement fixation, and
XX CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
XX CC AAB18003 represent nucleotide and amino acid sequences used in the
XX CC exemplification of the present invention

Novel vehicle-peptide molecule or its multimers useful for treating
 inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
 diabetic retinopathy, obesity, sleep disorders and infertility.

Claim 39; Page 43; 176pp; English.

The present invention describes a vehicle-peptide molecule (I) or its
 multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
 cycostatic, antirheumatic, antiarthritis, antidiabetic, ophthalmological,
 antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
 neuroprotective activities. (I) can be used as a therapeutic or
 prophylactic agent as well as for screening purposes. (I) is useful for
 diagnosing diseases characterised by dysfunction of their associated
 protein of interest, for identifying normal or abnormal proteins of
 interest, as a part of diagnostic kit to detect the presence of their
 proteins of interest in a biological sample. Additionally, (I) is useful
 for treating inflammatory and autoimmune diseases, tumour growth, cancer,
 rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
 infertility, and neurological degenerative diseases. (I), comprising EPO-
 mimetic compounds are useful for treating disorders characterised by low
 red blood cell levels such as anaemia. The TPO-mimetic comprising
 megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
 deficiency, such as thrombocytopenia, aplastic anaemia, metastatic
 tumour which result in thrombocytopenia, systemic lupus erythematosus,
 and Fanconi's syndrome. ABB72403 to ABB73426 and ABB35695 to ABB35777
 represent amino acid and nucleic acid sequences used in the
 exemplification of the present invention

CC -!- FUNCTION: Involved in protein import into chloroplasts. Seems to recognize chloroplast-designed precursor proteins and regulate their presentation to the translocation channel through GTP hydrolysis.
CC -!- SUBUNIT: Interacts with Toc75.
CC -!- SUBCELLULAR LOCATION: Chloroplast; outer membrane.
CC -!- SIMILARITY: Belongs to the TOC34 family.

 PS
 XX This sequence represents a thrombopoietin (TPO) receptor (TR) binding
 CC peptide of the invention. The peptide has: (i) a molecular weight below
 CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
 CC nM. The peptides are used to treat conditions requiring a thrombopoietin
 CC agonist, particularly haematological disorders or thrombocytopoenaia,

CC especially resulting from chemotherapy, radiation therapy or bone marrow
 CC transfusions. Also when labelled they may be used for diagnosis
 CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
 CC in vitro expansion of megakaryocytes and committed progenitor cells, and
 CC for the development/identification of other TR agonists. The compounds
 CC accelerate thrombocyte regeneration

 XX Novel composition of matter comprising an Fc domain and pharmacologically
 PT active peptides, useful for treating cancer and autoimmune diseases.
 PT
 XX Claim 19; Page 207; 608pp; English.
 PS
 XX The present invention describes composition of matter (I) comprising an
 CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
 CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
 CC independently selected from -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
 CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
 CC P3, and P4 = are each independently sequences of pharmacologically active
 CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
 CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
 CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
 CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
 CC cells from the present invention can be used for producing pharmaceutical
 CC compositions. The compositions are useful for treating cancer, asthma,
 CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
 CC a Fab domain) can provide a longer half-life or incorporate functions
 CC such as Fc receptor binding, protein A binding, complement fixation, and

CC possibly placental transfer. AAB69443 to AAB69526 and AAB16955 to
 CC AAB19003 represent nucleotide and amino acid sequences used in the
 CC exemplification of the present invention

 XX Novel vehicle-peptide molecule or its multimers useful for treating
 XX inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
 PT diabetic retinopathy, obesity, sleep disorders and infertility.
 PT
 XX Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
 CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
 CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
 CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
 CC neuroprotective activities. (I) can be used as a therapeutic or
 CC prophylactic agent as well as for screening purposes. (I) is useful for
 CC diagnosing diseases characterised by dysfunction of their associated
 CC protein of interest, for identifying normal or abnormal proteins of
 CC interest, as a part of diagnostic kit to detect the presence of their
 CC proteins of interest in a biological sample. Additionally, (I) is useful
 CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
 CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-
 CC mimetic compounds are useful for treating disorders characterised by low
 CC red blood cell levels such as anaemia. The TPO-mimetic comprising
 CC compounds are useful for treating conditions that involve an existing
 CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
 CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
 CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
 CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
 CC represent amino acid and nucleic acid sequences used in the
 CC exemplification of the present invention

 XX New CDR mimetibody comprising a portion of a heavy or light chain
 PT variable region comprising human framework or ligand binding region,
 PT useful for preparing a composition for treating e.g., immune,
 PT cardiovascular or neurologic disease.

XX Disclosure; SEQ ID NO 470; 97pp; English.

XX This invention relates to novel mammalian CDR mimetibodies, specific
 CC portions or variants thereof. Specifically, it refers to an antibody
 CC fragment where a protein has been inserted into, or replaces a portion
 CC of, one or more CDR regions, such that each CDR mimetibody comprises at
 CC least one portion of a heavy chain or light chain variable region, which
 CC itself comprises at least one human framework region and at least one
 CC ligand binding region (LBR). The present invention describes human
 CC mimetibodies, including modified immunoglobulins and cleavage products
 CC that can be useful in gene therapy and the generation of transgenic
 CC plants and animals. Furthermore, the CDR mimetibody is useful for
 CC preparing compositions for modulating, treating or reducing the symptoms
 CC of immune, cardiovascular, infectious, malignant and/or neurologic
 CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,

CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX New CHI-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX Claim 2; SEQ ID NO 470; 129pp; English.

XX This invention relates to CHI deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nontropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CHI-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX New CHI deleted mimetibody polypeptide and nucleic acid, useful for
PT diagnosing, preventing or treating cardiovascular, dermatologic, and
PT endocrine, gastrointestinal, gynecologic, infectious, neurologic and
PT nutritional disorders.

XX Claim 14; SEQ ID NO 470; 123pp; English.

XX This invention relates to CHI deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an osteopathic,
CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
CC immunomodulator, antiallergic, muscular-Gen, cytostatic,
CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or
CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
CC modulator or cytokine-agonist. The methods and compositions of the
CC present invention are useful for the diagnosis, prevention and/or

CC treatment of diseases or conditions associated with aberrant expression
 CC or activity of the CHI deleted mimetibody, such as a bone or joint,
 CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
 CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
 CC obstetric, haematologic, immunological, allergic, infectious,
 CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
 CC pediatric, psychiatric, renal or pulmonary disorders. The present
 CC sequence is that of a peptide which may be used during the creation of a
 CC mimetibody of the invention.

PT microbial source, useful for producing plants with improved properties.

XX

PS Claim 1; SEQ ID NO 2776; 122pp; English.

XX

CC The invention relates to a recombinant DNA construct comprising a
 CC promoter functional in a plant cell, where the promoter is positioned to
 CC provide for expression of a polynucleotide encoding a polypeptide from a
 CC microbial source. The invention also relates to a transformed plant
 CC comprising the recombinant DNA construct and a method of producing a
 CC transformed plant having an improved property. The plant is a crop plant
 CC such as maize or soybean. The method of producing a transformed plant
 CC having an improved property comprises transforming a plant with the

CC recombinant DNA construct and growing the transformed plant, where the
 CC polynucleotide or polypeptide is useful for improving plant properties.
 CC The recombinant DNA construct is useful for producing plants with
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
 CC increased resistance to plant disease, better growth rate by modification
 CC of the cell cycle pathway with plant growth regulators, increased rate of
 CC homologous recombination, modified seed oil or protein yield and/or
 CC content, improved yield by modification of carbohydrate, nitrogen or
 CC phosphorus use and/or uptake, by modification of photosynthesis or by
 CC providing improved plant growth and development under at least one stress
 CC condition, improved lignin production or improved galactomannan
 CC production. This sequence represents a bacterial polypeptide used in the
 CC scope of the invention. Note: The sequence data for this patent did not
 CC form part of the printed specification but was obtained in electronic
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New Acinetobacter baumannii proteins and nucleic acids, useful as reagents
 PT for diagnosing a bacterial disease, as components of antibacterial
 PT vaccines, as targets for antibacterial drugs, or as biocontrol agents for
 PT plants.

XX

PS Example; SEQ ID NO 8055; 328pp; English.

XX

CC The invention relates to isolated Acinetobacter baumannii nucleic acids.
 CC The A. baumannii nucleic acids and polypeptides are useful as reagents
 CC for diagnosing a bacterial disease, as components of antibacterial
 CC vaccines, as targets for antibacterial drugs, to detect the presence of
 CC A. baumannii and other Acinetobacter species in a sample, in screening
 CC compounds for the ability to interfere with the A. baumannii life cycle
 CC or to inhibit A. baumannii infection, and as biocontrol agents for
 CC plants. The present sequence represents the amino acid sequence of an A.

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
XX for expression of a polynucleotide encoding a polypeptide from a
XX microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 3909; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
XX promoter functional in a plant cell, where the promoter is positioned to
XX provide for expression of a polynucleotide encoding a polypeptide from a
XX microbial source. The invention also relates to a transformed plant
XX comprising the recombinant DNA construct and a method of producing a
XX transformed plant having an improved property. The plant is a crop plant
XX such as maize or soybean. The method of producing a transformed plant
XX having an improved property comprises transforming a plant with the
XX recombinant DNA construct and growing the transformed plant, where the
XX polynucleotide or polypeptide is useful for improving plant properties.
XX The recombinant DNA construct is useful for producing plants with
XX improved plant properties, e.g. improved cold, heat or drought tolerance,
XX tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
XX increased resistance to plant disease, better growth rate by modification
XX of the cell cycle pathway with plant growth regulators, increased rate of
XX content, improved yield by modification of carbohydrate, nitrogen or
XX phosphorus use and/or uptake, by modification of photosynthesis or by
XX providing improved plant growth and development under at least one stress
XX condition, improved lignin production or improved galactomannan
XX production. This sequence represents a bacterial polypeptide used in the
XX scope of the invention. Note: The sequence data for this patent did not
XX form part of the printed specification but was obtained in electronic
XX format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX New nucleic acid that is a pancreatic cancer antigen for preventing,
XX treating, or ameliorating a medical condition, particular pancreatic
XX cancer, or for use in assays for diagnosing a pathological condition.
XX
XX Claim 11; Page 1188; 1379pp; English.
XX
XX AAC98773 to AAC99231 encode the human pancreatic cancer associated
XX proteins, called pancreatic cancer antigens, given in AAB54008 to
XX AAB54466. The human pancreatic cancer antigens have cytostatic,
XX neuroprotective, nontropic, immunomodulatory, relaxant, contraceptive,
XX gynaecological, cardiant and antiinflammatory activities, and can be used
XX in gene therapy. The polynucleotide and proteins can be used for
XX preventing, treating, or ameliorating a medical condition or in assays
XX for diagnosing a pathological condition or a susceptibility to one in a
XX subject. Binding partners to the proteins and the activity of the
XX proteins can be identified. The pancreatic cancer antigens can be used to
XX detect, treat or prevent pancreatic disorders, especially cancer.
XX Agonists and antagonists to the antigens can be screened for. The
XX pancreatic cancer antigen polynucleotides can be used to design nucleic
XX acid hybridisation probes that can be used in chromosome mapping, linkage
XX analysis, tissue identification and/or typing and a variety of forensic
XX and diagnostic methods. The proteins can be used to generate antibodies
XX which are used to purify, detect and target the polypeptides, including
XX both in vivo and in vitro diagnostic and therapeutic methods. The
XX proteins can be used to treat or prevent neural, immune system, muscular,
XX reproductive, gastrointestinal, pulmonary, cardiovascular, renal or
XX proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent
XX sequences used in the exemplification of the present invention

XX Novel D-aminoacylase-encoding gene derived from filamentous fungus
PT Hypomyces mycophilus, useful for producing D-tryptophan from N-acetyl-D-
PT tryptophan, useful as medicinal raw material.
XX Claim 1; Page 17-20; 33pp; English.
XX This sequence shows a D-aminoacylase polypeptide. D-aminoacylase has
XX physicochemical properties that include the action of the enzyme on N-
CC acetyl-D-amino acids to produce the corresponding D-amino acids, and
CC substrate specificity, where the enzyme acts on N-acetyl-D-tryptophan, N-
CC acetyl-D-phenylalanine, N-acetyl-D-valine, N-acetyl-L-tryptophan, and N-
CC acetyl-D-methionine, but not on N-acetyl-L-tryptophan, N-acetyl-L-
CC phenylalanine, N-acetyl-L-valine, N-acetyl-L-leucine, or N-acetyl-L-
CC methionine. Fragments of the D-aminoacylase cDNA are useful as primers or
CC as probes for synthesizing or detecting the full length cDNA. D-
CC aminoacylase is useful for producing D-amino acids. The enzyme has
CC substrate specificity, thermal stability and produces D-amino acid
CC efficiently by incubating the fungus derived D-aminoacylase with N-acetyl
CC -D-amino acid under proper conditions. The enzyme has high enzymatic
CC activity for N-acetyl-D-tryptophan and is excellent in industrial
CC applicability. The recombinant polypeptide of D-aminoacylase can be
CC manufactured at a low cost and in large quantities

XX New isolated Mycobacterium tuberculosis polypeptides and DNA - used to
PT develop products for the detection of M. tuberculosis infection and
PT diagnosis of tuberculosis.
XX Example 3; Page 173-175; 250pp; English.
XX This polypeptide comprises Mycobacterium tuberculosis antigen XP14. Its
CC amino acid sequence was deduced from a DNA molecule (see AAW44415)
CC isolated from a M. tuberculosis strain Erdman genomic DNA expression
CC library using sera from patients having extrapulmonary tuberculosis. XP14
CC shows some sequence similarity to known sequences. The invention relates
CC to compositions and methods for diagnosing tuberculosis. It provides
CC polypeptides (see AAW64291-W64379) comprising an antigenic portion of a
CC soluble M. tuberculosis antigen, or an immunogenic portion of a M.
CC tuberculosis antigen, as well as DNA sequences encoding such

CC polypeptides, recombinant expression vectors and transformed or
 CC transfected host cells. Also claimed are methods and diagnostic kits for
 CC detecting M. tuberculosis infection in a patient using these
 CC polypeptides, antibodies or oligonucleotide probes and primers. (Updated
 CC on 17-OCT-2003 to standardise OS field)

XX
XX Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris.
XX
XX Example 1; SEQ ID NO 15353; 1069pp; English.
XX
XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC P. acnes is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of P. acnes in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for P. acnes proteins. These antibodies can be used to
CC downregulate expression and activity of P. acnes polypeptides and
CC therefore treat P. acnes infections. The antibodies may also be used as
CC diagnostic agents for determining P. acnes presence, for example, by
CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at

XX
XX New Propionibacterium acnes polypeptides and polynucleotides encoding the
PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
PT or for stimulating an immune response specific for a P. acnes protein.
XX
XX Example 1; SEQ ID NO 15353; 1481pp; English.
PS
XX
XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
CC encoding a Propionibacterium acnes protein. The invention also relates to
CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
CC immunogenic fragments of P. acnes polypeptides. The invention
CC additionally encompasses expression vectors and host cells comprising a
CC polynucleotide of the invention; antibodies against polypeptides of the
CC invention; fusion proteins comprising a polypeptide of the invention; a
CC method for stimulating an immune response specific for a P. acnes
CC polypeptide and an isolated T cell population comprising P. acnes polypeptides,
CC via this method; a vaccine composition (comprising P. acnes polypeptides,
CC polynucleotides, antibodies, fusion proteins, T cell populations, or
CC antigen-presenting cells that express the polypeptide); a method and kit
CC for detecting or determining the presence or absence of P. acnes in a
CC patient; and a method for inhibiting the development of P. acnes in a
CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
CC proteins, T cell populations or antigen-presenting cells that express the
CC polypeptides are useful for diagnosing, preventing or treating acne
CC vulgaris, or for stimulating an immune response specific for a P. acnes
CC protein. The polynucleotides can also be used as probes or primers for
CC nucleic acid hybridisation. The vaccine composition is useful for the
CC stimulation of an immune response against P. acnes, or for treating acne,
CC and the kit is useful for performing a diagnostic assay. The present
CC sequence represents a polypeptide predicted to be encoded by an ORF (open
CC reading frame) contained within the P. acnes polynucleotides of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New isolated cancer-associated polynucleotides and polypeptides useful
PT for diagnosing, preventing or treating cancers, especially lymphoma and
PT leukemia, or in screening for agents that modulate cancer.
XX disclosure; seqid 697; 310pp; English.

PS The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells (comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a mouse CAP protein sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX Novel polynucleotides derived from Coryneform bacteria, for identifying
PT mutation point of a gene, measuring expression of a gene, analyzing
PT expression profile or pattern of a gene and identifying homologous gene.

XX Claim 17; SEQ ID NO 6303; 246pp + Sequence Listing; English.

XX The present invention provides a number of nucleotide and protein
CC sequences from the Coryneform bacterium Corynebacterium glutamicum. These
CC are useful for identifying the mutation point of a gene derived from a
CC mutant of coryneform bacterium, measuring expression amount and analysing
CC the expression profile or expression pattern of a gene derived from
CC Coryneform bacterium, and identifying a homologue of a gene derived from
CC coryneform bacterium. Coryneform bacteria are useful for producing amino
CC acids, nucleic acids, vitamins, saccharides and organic acids.
CC particularly L-lysine. The present sequence is a protein described in the
CC exemplification of the invention. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from the European Patent Office

PT New recombinant DNA constructs useful in the field of biochemistry and
PT genetics, and in particular for producing transgenic plants with improved
PT biological characteristics.

XX
PS Claim 2; SEQ ID NO 8014; 14pp; English.

XX
XX
CC The invention relates a recombinant DNA construct comprising a
CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
CC Arabidopsis, wheat and rape but the specification does not indicate which
CC sequences is derived from which organism. Also included is a method of
CC producing a plant having an improved property, comprising transforming a
CC plant with a recombinant DNA construct comprising a promoter region
CC functional in a plant cell operably joined to a polynucleotide encoding a
CC polypeptide associated with the property, and growing the transformed
CC plant. The property is selected from improving plant cold tolerance, for
CC manipulating growth rate in plant cells by modification of the cell cycle
CC pathway, for improving plant drought tolerance, for providing increased
CC resistance to plant disease, for galactomannan production, for production
CC of plant growth regulators, for improving plant heat tolerance, for
CC improving plant tolerance to herbicides, for increasing the rate of
CC homologous recombination in plants, for lignin production, for improving
CC plant tolerance to extreme osmotic conditions, for improving plant
CC tolerance to pathogens or pests, for yield improvement by modification of
CC photosynthesis, for modifying seed oil yield and/or content, for
CC modifying seed protein yield and/or content, for yield improvement by
CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
CC and for yield improvement by providing improved plant growth and
CC development under at least one stress condition. The polynucleotide may
CC also encode a plant transcription factor. The methods and compositions of
CC the present invention are useful in the field of biochemistry and
CC genetics, in particular for producing transgenic plants with improved
CC biological characteristics such as increased yield, improved nitrogen
CC flow, increasing plant tolerance to cold or heat, improving plant
CC tolerance to plant pests or pathogens. They can also be used in physical
CC arrays of molecules, plant breeding markers, computer-based storage and
CC analysis systems. The present sequence is one of the 5544 plant protein
CC sequences of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
XX for expression of a polynucleotide encoding a polypeptide from a
XX microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 18956; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
XX promoter functional in a plant cell, where the promoter is positioned to
XX provide for expression of a polynucleotide encoding a polypeptide from a
XX microbial source. The invention also relates to a transformed plant
XX comprising the recombinant DNA construct and a method of producing a
XX transformed plant having an improved property. The plant is a crop plant
XX such as maize or soybean. The method of producing a transformed plant
XX having an improved property comprises transforming a plant with the
XX recombinant DNA construct and growing the transformed plant, where the
XX polynucleotide or polypeptide is useful for improving plant properties.
XX The recombinant DNA construct is useful for producing plants with
XX improved plant properties, e.g. improved cold, heat or drought tolerance,
XX tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
XX increased resistance to plant disease, better growth rate by modification
XX of the cell cycle pathway with plant growth regulators, increased rate of
XX homologous recombination, modified seed oil or protein yield and/or
XX content, improved yield by modification of carbohydrate, nitrogen or
XX phosphorus use and/or uptake, by modification of photosynthesis or by
XX providing improved plant growth and development under at least one stress
XX condition, improved lignin production or improved galactomannan
XX production. This sequence represents a bacterial polypeptide used in the
XX scope of the invention. Note: The sequence data for this patent did not
XX form part of the printed specification but was obtained in electronic
XX format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX Propionibacterium acnes polypeptides and nucleic acids useful for
XX vaccinating against and diagnosing infections, especially useful for
XX treating acne vulgaris.
XX
XX Example 1; SEQ ID NO 25950; 1069pp; English.
XX
XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
XX polypeptides. The proteins and their associated DNA sequences are used in
XX the treatment, prevention and diagnosis of medical conditions caused by
XX P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
XX pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
XX P. acnes is also involved in infections of bone, joints and the central
XX nervous system, however it is particularly involved in the inflammatory
XX lesions associated with acne vulgaris. A method for detecting the
XX presence or absence of P. acnes in a patient comprises contacting a
XX sample with a binding agent that binds to the proteins of the invention
XX and determining the amount of bound protein in the sample. The
XX polypeptides may be used as antigens in the production of antibodies
XX specific for P. acnes proteins. These antibodies can be used to
XX downregulate expression and activity of P. acnes polypeptides and
XX therefore treat P. acnes infections. The antibodies may also be used as
XX diagnostic agents for determining P. acnes presence, for example, by
XX enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at

XX
XX New Propionibacterium acnes polypeptides and polynucleotides encoding the
PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
PT or for stimulating an immune response specific for a P. acnes protein.
XX
XX Example 1; SEQ ID NO 25950; 1481pp; English.
XX
XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
CC encoding a Propionibacterium acnes protein. The invention also relates to
CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
CC immunogenic fragments of P. acnes polypeptides. The invention
CC additionally encompasses expression vectors and host cells comprising a
CC polynucleotide of the invention; antibodies against polypeptides of the
CC polynucleotide of the invention; fusion proteins comprising a polypeptide of the invention; a
CC method for stimulating an immune response specific for a P. acnes
CC polypeptide and an isolated T cell population comprising T cells prepared
CC via this method; a vaccine composition (comprising P. acnes polypeptides,
CC polynucleotides, antibodies, fusion proteins, T cell populations, or
CC antigen-presenting cells that express the polypeptide); a method and kit
CC for detecting or determining the presence or absence of P. acnes in a
CC patient; and a method for inhibiting the development of P. acnes in a
CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
CC proteins, T cell populations or antigen-presenting cells that express the
CC polypeptides are useful for diagnosing, preventing or treating acne
CC vulgaris, or for stimulating an immune response specific for a P. acnes
CC protein. The polynucleotides can also be used as probes or primers for
CC nucleic acid hybridisation. The vaccine composition is useful for the
CC stimulation of an immune response against P. acnes, or for treating acne,
CC and the kit is useful for performing a diagnostic assay. The present
CC sequence represents a polypeptide predicted to be encoded by an ORF (open
CC reading frame) contained within the P. acnes polynucleotides of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT bacteria, useful for screening agents that modulate the subunit activity
PT which is useful in the treatment of bacterial infections e.g. S. pyogenes
PT and S. aureus.
XX Claim 19; Page 340-341; 500pp; English.
XX The present invention describes nucleic acid sequences encoding a DNA
CC polymerase III holoenzyme delta subunit (I) from bacteria. (I) has
CC antibacterial; tuberculostatic; antileprotic. Methods from the present
CC invention can be used for screening for bacterial DNA polymerase
CC holoenzyme delta subunit proteins and agents that modulate their
CC activity. The agents are useful in the treatment of bacterial infections
CC e.g. S. pyogenes, S. aureus, S. pneumoniae, Mycoplasma, Yersinia,
CC Corynebacterium, Salmonella, Mycobacterium tuberculosis or M. leprae. The
CC invention provides a convenient means of identifying compounds which
CC modulate DNA replication in bacteria and therefore provide antibacterial
CC targets, and which are also useful for amplification of DNA. ABL87935 to
CC ABL88071 and ABB84724 to ABB84816 represent sequences used in the
CC exemplification of the present invention

XX Nucleic acid encoding a DNA polymerase III holoenzyme delta subunit from

PT bacteria, useful for screening agents that modulate the subunit activity
 PT which is useful in the treatment of bacterial infections e.g. *S. pyogenes*
 PT and *S. aureus*.

XX Claim 19; Fig 7F; 500pp; English.

XX CC The present invention describes nucleic acid sequences encoding a DNA
 CC polymerase III holoenzyme delta subunit (I) from bacteria. (I) has
 CC antibacterial, tuberculostatic; antileprotic. Methods from the present
 CC invention can be used for screening for bacterial DNA polymerase
 CC holoenzyme delta subunit proteins and agents that modulate their
 CC activity. The agents are useful in the treatment of bacterial infections
 CC e.g. *S. pyogenes*, *S. aureus*, *S. pneumoniae*, *Mycoplasma*, *Yersinia*,
 CC *Corynebacterium*, *Salmonella*, *Mycobacterium tuberculosis* or *M. leprae*. The
 CC invention provides a convenient means of identifying compounds which
 CC modulate DNA replication in bacteria and therefore provide antibacterial
 CC targets, and which are also useful for amplification of DNA. ABL87935 to
 CC ABL88071 and ABB84724 to ABB84816 represent sequences used in the
 CC exemplification of the present invention

XX PT New isolated polynucleotide and encoded polypeptides, useful in

PT diagnostics, forensics, gene mapping, identification of mutations

PT responsible for genetic disorders or other traits and to assess

PT biodiversity.

XX Claim 20; SEQ ID NO 31832; 103pp; English.

XX CC The invention relates to isolated polynucleotide (I) and polypeptide (II)

CC sequences. (I) is useful as hybridisation probes, polymerase chain

CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,

CC and in recombinant production of (II). The polynucleotides are also used

CC in diagnostics as expressed sequence tags for identifying expressed
 CC genes. (I) is useful in gene therapy techniques to restore normal
 CC activity of (II) or to treat disease states involving (II). (II) is
 CC useful for generating antibodies against it, detecting or quantitating a
 CC polypeptide in tissue, as molecular weight markers and as a food
 CC supplement. (II) and its binding partners are useful in medical imaging
 CC of sites expressing (II). (I) and (II) are useful for treating disorders
 CC involving aberrant protein expression or biological actions. The
 CC polypeptide and polynucleotide sequences have applications in
 CC diagnostics, forensics, gene mapping, identification of mutations
 CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic
 CC amino acid sequences of the invention. Note: The sequence data for this
 CC patent did not appear in the printed specification, but was obtained in

XX PT New antisense nucleic acids, useful for identifying proteins or screening

PT for homologous nucleic acids required for cellular proliferation to

PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 69464; 1766pp; English.

XX CC The invention relates to an isolated nucleic acid comprising any one of

CC the 6213 antisense sequences given in the specification where expression

CC of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid

CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
 CC the target prokaryotic essential genes. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

 XX New recombinant DNA constructs useful in the field of biochemistry and
 PT genetics, and in particular for producing transgenic plants with improved
 PT biological characteristics.
 XX
 XX Claim 2; SEQ ID NO 6445; 14pp; English.
 PS
 XX The invention relates a recombinant DNA construct comprising a
 CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
 CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
 CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
 CC Arabidopsis, wheat and rape but the specification does not indicate which
 CC sequences is derived from which organism. Also included is a method of
 CC producing a plant having an improved property, comprising transforming a
 CC plant with a recombinant DNA construct comprising a promoter region
 CC functional in a plant cell operably joined to a polynucleotide encoding a
 CC polypeptide associated with the property, and growing the transformed
 CC plant. The property is selected from improving plant cold tolerance, for
 CC manipulating growth rate in plant cells by modification of the cell cycle
 CC pathway, for improving plant drought tolerance, for providing increased
 CC resistance to plant disease, for galactomannan production, for production
 CC of plant growth regulators, for improving plant heat tolerance, for
 CC improving plant tolerance to herbicides, for increasing the rate of
 CC homologous recombination in plants, for lignin production, for improving
 CC plant tolerance to extreme osmotic conditions, for improving plant
 CC tolerance to pathogens or pests, for yield improvement by modification of
 CC photosynthesis, for modifying seed oil yield and/or content, for
 CC modifying seed protein yield and/or content, for yield improvement by
 CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
 CC and for yield improvement by providing improved plant growth and
 CC development under at least one stress condition. The polynucleotide may
 CC also encode a plant transcription factor. The methods and compositions of
 CC the present invention are useful in the field of biochemistry and
 CC genetics, in particular for producing transgenic plants with improved
 CC biological characteristics such as increased yield, improved nitrogen

CC flow, increasing plant tolerance to cold or heat, improving plant
 CC tolerance to extreme osmotic and drought conditions, and improving plant
 CC tolerance to plant pests or pathogens. They can also be used in physical
 CC arrays of molecules, plant breeding markers, computer-based storage and
 CC analysis systems. The present sequence is one of the 5544 plant protein
 CC sequences of the invention. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from USPTO at
 CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

CC clones. 830 cDNA molecules encoding a human protein have been isolated
CC and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have
CC been determined. Primers for synthesising the full length cDNA are useful
CC for clarifying the function of the protein encoded by the cDNA. The full
CC length clones were obtained by construction of full length enriched cDNA
CC libraries that were synthesised by the oligo-capping method. The primers
CC enable the production of the full length cDNA easily without any special
CC methods. The present sequence is a polypeptide encoded by a full length
CC human cDNA of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in CD-ROM
CC format directly from EPO

DR WPI; 2004-441208/41.
XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
XX Example 2; SEQ ID NO 4111; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC protein of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

RESULT 1
S76487
probable copper-transporting ATPase (EC 3.6.1.-) - Synecchocystis sp. (strain PCC 6803)
C:Species: Synecchocystis sp.
A:Variety: PCC 6803
C:Date: 16-Oct-1998 #sequence_revision 16-Oct-1998 #text_change 09-Jul-2004
A:Accession: S76487
R:Kaneko, T.; Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; Miyajima, N.; O. K.; Okumura, S.; Shimpo, S.; Takeuchi, C.; Wada, T.; Watanabe, A.; Yamada, M.; Yasuda
DNA Res. 3, 109-136, 1996
A:Title: Sequence analysis of the genome of the unicellular cyanobacterium Synecchocystis
s.
A:Reference number: S74322; MUID:97061201; PMID:8905231
A:Accession: S76487
A:Status: preliminary
A:Molecule type: DNA
A:Residues: 1-780 <XAN>
A:Cross-references: UNIPROT:P74512; UNIPARC:UPI00000D35A0; EMBL:D90915; GB:AB001339; NID
A:Note: the nucleotide sequence was submitted to the EMBL Data Library, June 1996
C:Function:

A:Description: copper transport coupled with ATP hydrolysis
C:Superfamily: Enterococcus copper-transporting ATPase copA; ATPase nucleotide-binding d
C:Keywords: ATP; enterococcus; copper transport; hydrolase; ion transport; phosphoprotein; transmembra
F:30-59/Domain: heavy-metal-associated homology <HMA>
F:149-505/Domain: ATPase transduction domain homology <ATT>
F:581-725/Domain: ATPase nucleotide-binding domain homology <ATN>
F:35-38/Binding site: copper (Cys) #status predicted
F:302/Active site: Glu #status predicted
F:460/Active site: Asp (aspartylphosphate intermediate) #status predicted

CC -1- FUNCTION: Catalyzes the condensation of ATP and PRPP to form N'-
CC 5'-phosphoribosyl-ATP (PR-ATP). Has a crucial role in the pathway
CC because the rate of histidine biosynthesis seems to be controlled
CC primarily by regulation of hisG enzymatic activity (By
CC similarity).
CC -1- CATALYTIC ACTIVITY: 1-(5-phospho-D-riboseyl)-ATP + diphosphate =
CC ATP + 5-phospho-alpha-D-ribose 1-diphosphate.
CC -1- COFACTOR: Magnesium (By similarity).
CC -1- ENZYME REGULATION: Feedback inhibited by histidine (By
CC similarity).
CC -1- PATHWAY: Amino-acid biosynthesis; L-histidine biosynthesis; L-
CC histidine from PRPP; step 1.
CC -1- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
CC -1- SIMILARITY: Belongs to the ATP phosphoribosyltransferase family.
CC Long subfamily.

"Proteomic analysis of in vivo phosphorylated synaptic proteins.";
J. Biol. Chem. 280:5972-5982(2005).
-1- FUNCTION: Delays the onset of cell spreading in the early stages
of cell adhesion to fibronectin. Also involved in calcium-
dependent exocytosis from PC12 cells (By similarity).
-1- SUBUNIT: Interacts with BCAR1/p130Cas through its C-terminal
domain. Also interacts with the N-terminal coiled-coil region of
SNAP25 (By similarity).
-1- ALTERNATIVE PRODUCTS:
Event=Alternative splicing; Named isoforms=3;
Name=1; Synonyms=1a;
IsoId=Q9QW16-1; Sequence=Displayed;
Name=2; Synonyms=1b;
IsoId=Q9QW16-2; Sequence=VSP_050631;
Name=3;
IsoId=Q9QW16-3; Sequence=VSP_050632;
Note=No experimental confirmation available;
-1- TISSUE SPECIFICITY: Expressed mainly in brain, testis and
epithelial-rich tissues such as mammary gland, lung and kidney.
-1- PTM: Tyrosine-phosphorylated in response to EGF and to cell
adhesion to integrin ligands (By similarity).
-1- SIMILARITY: Belongs to the p140Cap family.
-1- CAUTION: Ref.2 sequence differs from that shown due to frameshifts
in positions 483 and 527.

PT for treatment of hematological disease and thrombocytopoenaia.
XX Disclosure; Col 13-14; 36pp; English.
XX This sequence represents a thrombopoietin (TPO) receptor (TR) binding
CC peptide of the invention. The peptide has: (i) a molecular weight below
CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
CC mM. The peptides are used to treat conditions requiring a thrombopoietin
CC agonist, particularly haematological disorders or thrombocytopoenaia,

CC especially resulting from chemotherapy, radiation therapy or bone marrow
CC transfusions. Also when labelled they may be used for diagnosis
CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
CC in vitro expansion of megakaryocytes and committed progenitor cells, and
CC accelerate thrombocyte regeneration

XX Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX Claim 19; Page 208; 608pp; English.
XX The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)-a-P1-(X2)b, where: P1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and

CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
 CC AAB18003 represent nucleotide and amino acid sequences used in the
 CC exemplification of the present invention

 XX
 XX Novel vehicle-peptide molecule or its multimers useful for treating
 PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
 PT diabetic retinopathy, obesity, sleep disorders and infertility.
 XX
 XX Claim 39; Page 43; 176pp; English.

XX
 XX The present invention describes a vehicle-peptide molecule (I) or its
 CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
 CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
 CC antianemic, anorectic, antiinfertility, haemostatic, dermatological and
 CC neuroprotective activities. (I) can be used as a therapeutic or
 CC prophylactic agent as well as for screening purposes. (I) is useful for
 CC diagnosing diseases characterised by dysfunction of their associated
 CC protein of interest, for identifying normal or abnormal proteins of
 CC interest, as a part of diagnostic kit to detect the presence of their
 CC proteins of interest in a biological sample. Additionally, (I) is useful
 CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
 CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-
 CC mimetic compounds are useful for treating disorders characterised by low
 CC red blood cell levels such as anaemia. The TPO-mimetic comprising
 CC compounds are useful for treating conditions that involve an existing
 CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
 CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
 CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
 CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
 CC represent amino acid and nucleic acid sequences used in the
 CC exemplification of the present invention

 XX
 XX New CDR mimetibody comprising a portion of a heavy or light chain
 PT variable region comprising human framework or ligand binding region,
 PT useful for preparing a composition for treating e.g., immune,
 PT cardiovascular or neurologic disease.
 XX
 XX Disclosure; SEQ ID NO 473; 97pp; English.

XX
 XX This invention relates to novel mammalian CDR mimetibodies, specific
 CC portions or variants thereof. Specifically, it refers to an antibody
 CC fragment where a protein has been inserted into, or replaces a portion
 CC of, one or more CDR regions, such that each CDR mimetibody comprises at
 CC least one portion of a heavy chain or light chain variable region, which
 CC itself comprises at least one human framework region and at least one
 CC ligand binding region (LBR). The present invention describes human
 CC mimetibodies, including modified immunoglobulins and cleavage products
 CC that can be useful in gene therapy and the generation of transgenic
 CC plants and animals. Furthermore, the CDR mimetibody is useful for
 CC preparing compositions for modulating, treating or reducing the symptoms
 CC of immune, cardiovascular, infectious, malignant and/or neurologic
 CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,

CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX Claim 2; SEQ ID NO 473; 129pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nontropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX New CH1 deleted mimetibody polypeptide and nucleic acid, useful for
PT diagnosing, preventing or treating cardiovascular, dermatologic,
PT endocrine, gastrointestinal, gynecologic, infectious, neurologic and
PT nutritional disorders.

XX Claim 14; SEQ ID NO 473; 123pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an osteopathic,
CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
CC immunomodulator, antiallergic, muscular-Gen, cytostatic,
CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or
CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
CC modulator or cytokine-agonist. The methods and compositions of the
CC present invention are useful for the diagnosis, prevention and/or

CC treatment of diseases or conditions associated with aberrant expression
 CC or activity of the CHI deleted mimetoid, such as a bone or joint,
 CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
 CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
 CC obstetric, haematologic, immunological, allergic, infectious,
 CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
 CC pediatric, psychiatric, renal or pulmonary disorders. The present
 CC sequence is that of a peptide which may be used during the creation of a
 CC mimetoid of the invention.

XX New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 64159; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway

CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
 CC the target prokaryotic essential genes. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

PT  New tumor-associated antigenic target polypeptides and nucleic acids,
PT  useful in preparing a medicament for treating or detecting a
PT  proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT  prostate cancer or tumor.
XX
PS  Claim 12; SEQ ID NO 4099; 7273pp; English.
XX
CC  The invention relates to human tumour-associated antigenic target (TAT)
CC  polypeptides, and their related nucleic acids. The TAT polypeptides are
CC  overexpressed in cancer tissues compared to normal tissues, and may thus
CC  serve as effective targets for the diagnosis and treatment of cancer in
CC  mammals. The invention also relates to nucleic acid and polypeptide
CC  sequences at least 80% identical to the TAT nucleic acids and
CC  polypeptides; expression vectors and host cells comprising a TAT nucleic
CC  acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC  molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC  TAT polypeptide; and methods and compositions for the treatment or
CC  diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC  antibodies, antagonists, binding molecules and compositions are useful
CC  for diagnosing or treating a cell proliferative disorder associated with
CC  increased TAT expression, particularly cancers such as breast cancer,
CC  colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC  cancer, pancreatic cancer, cervical cancer, cancers of the central
CC  nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC  used as hybridisation probes, in chromosome and gene mapping, in
CC  chromosome identification and in gene therapy. The present sequence
CC  represents a TAT polypeptide of the invention

PT  stimulating an immune response.
XX
PS  Claim 1; SEQ ID NO 699; 3009pp; English.
XX
CC  The present invention describes an isolated PRO nucleic acid (1). Also
CC  described: (1) a vector comprising (1); (2) a host cell comprising the
CC  vector of (1); (3) a process for producing a PRO polypeptides; (4) an
CC  isolated PRO polypeptide; (5) a chimeric molecule comprising the
CC  polypeptide of (4) fused to a heterologous amino acid sequence; (6) an
CC  antibody which specifically binds to a polypeptide of (4); (7) a
CC  composition of matter comprising a polypeptide of (4); an agonist or
CC  antagonist of the polypeptide or an antibody that binds to the
CC  polypeptide in combination with a carrier; (8) an article of manufacture
CC  comprising a container, a label on the container and a composition of
CC  matter of (7); (9) a method of treating an immune related disease in a
CC  mammal; (10) a method for determining the presence of a PRO polypeptide
CC  in a sample suspected of having the polypeptide; (11) a method of
CC  diagnosing an immune related disease or an inflammatory immune response
CC  in mammal; (12) a method of identifying a compound that inhibits or
CC  mimics the activity of or expression of a gene encoding a PRO polypeptide
CC  ; and (13) a method of stimulating the immune response in a mammal. The
CC  PRO sequences have anti-allergic, antianaemic, antiarthritic,
CC  antiasthmatic, antidiabetic, antiinflammatory, antiporiatic,
CC  antirheumatic, antithyroid, CNS, dermatological, gastrointestinal,
CC  haemostatic, hepatotropic, immunostimulant, immunosuppressive, muscular,
CC  nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and
CC  virucide activities, and can be used in gene therapy. The nucleic acid
CC  (1) and the encoded polypeptides, compositions, kits and methods are

```

CC useful in diagnosing and treating an immune related disease and in
CC stimulating an immune response. The present sequence represents a human
CC PRO protein from the present invention.

XX PS Biomarkers useful for predicting or determining the response of a mammal
PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.

XX Claim 5; SEQ ID NO 126; 141pp; English.

XX This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether
CC patient would be susceptible or resistant to treatment by an agent
CC modulating cdk activity. The invention also describes a method for
CC utilizing individualized genetic profiles for treating diseases and
CC disorders based on patient's response and molecular level, specialized
CC microarrays comprising the biomarkers described, antibodies directed
CC against the biomarkers and a cell culture model to identify biomarkers.
CC The cdk modulator is preferably N-5-[(5-(1,1-Dimethylethyl)-2-
CC oxazolyl)methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC tartaric acid salt. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC sequence represents a biomarker used in the method of the invention.

XX New recombinant DNA constructs useful in the field of biochemistry and
XX genetics, and in particular for producing transgenic plants with improved
XX biological characteristics.
XX
XX Claim 2; SEQ ID NO 6570; 14pp; English.
XX
XX The invention relates a recombinant DNA construct comprising a
XX polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
XX 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
XX (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
XX Arabidopsis, wheat and rape but the specification does not indicate which
XX sequences is derived from which organism. Also included is a method of
XX producing a plant having an improved property, comprising transforming a
XX plant with a recombinant DNA construct comprising a promoter region
XX functional in a plant cell operably joined to a polynucleotide encoding a
XX polypeptide associated with the property, and growing the transformed
XX plant. The property is selected from improving plant cold tolerance, for
XX manipulating growth rate in plant cells by modification of the cell cycle
XX pathway, for improving plant drought tolerance, for providing increased
XX resistance to plant disease, for galactomannan production, for production
XX of plant growth regulators, for improving plant heat tolerance, for
XX improving plant tolerance to herbicides, for increasing the rate of
XX homologous recombination in plants, for lignin production, for improving
XX plant tolerance to extreme osmotic conditions, for improving plant
XX tolerance to pathogens or pests, for yield improvement by modification of
XX photosynthesis, for modifying seed oil yield and/or content, for
XX modifying seed protein yield and/or content, for yield improvement by
XX modification of carbohydrate, nitrogen or phosphorus use and/or uptake
XX and for yield improvement by providing improved plant growth and
XX development under at least one stress condition. The polynucleotide may
XX also encode a plant transcription factor. The methods and compositions of
XX the present invention are useful in the field of biochemistry and
XX genetics, in particular for producing transgenic plants with improved
XX biological characteristics such as increased yield, improved nitrogen
XX flow, increasing plant tolerance to cold or heat, improving plant
XX tolerance to extreme osmotic and drought conditions, and improving plant
XX tolerance to plant pests or pathogens. They can also be used in physical
XX arrays of molecules, plant breeding markers, computer-based storage and
XX analysis systems. The present sequence is one of the 5544 plant protein
XX sequences of the invention. Note: The sequence data for this patent did
XX not form part of the printed specification, but was obtained in

PT Nucleic acids encoding a range of human polypeptides, useful in genetic
XX vaccination, testing and therapy.
XX
PS Claim 20; Page 278; 765pp; English.

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU3304 represent the amino acid sequences of novel human secreted proteins of the invention

XX New isolated nucleic acid representing a synthetic BAX-gene, useful as
 PT medicament for treating, preventing and/or alleviating yeast or fungal
 PT infections or proliferative disorders, or for preventing apoptosis in
 PT certain diseases.

XX Claim 36; Fig 1; 344pp; English.

XX This invention describes a novel nucleic acid representing a synthetic
 CC Bax gene. The Bax gene of the invention is useful for identifying Bax-
 CC resistant yeast or fungi, identifying, or obtaining and identifying
 CC Candida spp. sequences that are differentially expressed in a pathway
 CC eventually leading to programmed cell death or identifying inhibitors or
 CC inhibitor sequences of Bax-induced cell death. The products of the
 CC invention have cytostatic, fungicide, immunosuppressive, virucide and
 CC vasotropic activity and can be used in vaccines or for gene therapy. The
 CC isolated nucleic acids, polypeptides, pharmaceutical compositions,
 CC antisense molecules and antibodies are useful as medicaments or in
 CC preparing a medicament for treating, preventing and/or alleviating
 CC diseases associated with yeast or fungi or proliferative disorders, such
 CC as cancer, or for preventing apoptosis in certain diseases. The compounds
 CC or polypeptides, or the genetically modified organism are useful for
 CC preparing a medicament for modifying the endogenous flora of humans and
 CC other mammals. The vaccine is useful for immunising against yeast or
 CC fungal infections. Apoptosis-related diseases include autoimmune disease,
 CC ischaemia, diseases related with viral infections or neurodegenerations.
 CC This sequence represents a polypeptide associated with the Bax gene
 CC described in the disclosure of the invention

XX
XX New proteins and protein complexes from eukaryotes, useful as targets in
PT drug screening, or in diagnosing or screening for the presence of a
PT disease or disorder, or a predisposition for developing a disease or
PT disorder in a subject.
XX
XX Disclosure; SEQ ID NO 2219; 13pp; English.

XX
XX The invention relates to novel protein complexes comprising a first and a
CC second protein, or its derivative, fragment, homologue or variant. The
CC proteins are selected from given protein complexes, which are not defined
CC in the specification. The variants are encoded by nucleic acids that
CC hybridize to the nucleic acids encoding the proteins under low stringency
CC conditions. The protein complexes are useful as targets for an active
CC agent of a pharmaceutical. These protein complexes are particularly
CC useful as drugs targets for the treatment or preventing of a disease or
CC disorder. The complexes and methods above are useful in diagnosing or
CC screening for the presence of a disease or disorder or a predisposition
CC for developing a disease or disorder in a subject. These are also useful
CC in screening for a drug for treatment or prevention of a disease or
CC disorder. The molecule that modulates the amount, activity or protein
CC components of the complex is useful for the manufacture of a medicament
CC for the treatment or prevention of a disease or disorder. This sequence
CC corresponds to a protein of the invention. (Note: the sequence data for
CC this patent did not form part of the printed specification but was
CC obtained from the EPO in electronic format).

XX
XX Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris.
XX
XX Example 1; SEQ ID NO 28786; 1069pp; English.

XX
XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC P. acnes is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of P. acnes in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for P. acnes proteins. These antibodies can be used to
CC downregulate expression and activity of P. acnes polypeptides and
CC therefore treat P. acnes infections. The antibodies may also be used as
CC diagnostic agents for determining P. acnes presence, for example, by
CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
XX New Propionibacterium acnes polypeptides and polynucleotides encoding the
XX polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
XX or for stimulating an immune response specific for a P. acnes protein.
XX
XX Example 1; SEQ ID NO 28786; 1481bp; English.
XX
XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
XX encoding a Propionibacterium acnes protein. The invention also relates to
XX polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
XX immunogenic fragments of P. acnes polypeptides. The invention
XX additionally encompasses expression vectors and host cells comprising a
XX polynucleotide of the invention; antibodies against polypeptides of the
XX polynucleotide of the invention; fusion proteins comprising a polypeptide of the invention; a
XX method for stimulating an immune response specific for a P. acnes
XX polypeptide and an isolated T cell population comprising T cells prepared
XX via this method; a vaccine composition (comprising P. acnes polypeptides,
XX polynucleotides, antibodies, fusion proteins, T cell populations, or
XX antigen-presenting cells that express the polypeptide); a method and kit
XX for detecting or determining the presence or absence of P. acnes in a
XX patient; and a method for inhibiting the development of P. acnes in a
XX patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
XX proteins, T cell populations or antigen-presenting cells that express the
XX polypeptides are useful for diagnosing, preventing or treating acne
XX vulgaris, or for stimulating an immune response specific for a P. acnes
XX protein. The polynucleotides can also be used as probes or primers for
XX nucleic acid hybridisation. The vaccine composition is useful for the
XX stimulation of an immune response against P. acnes, or for treating acne,
XX and the kit is useful for performing a diagnostic assay. The present
XX sequence represents a polypeptide predicted to be encoded by an ORF (open
XX reading frame) contained within the P. acnes polynucleotides of the
XX invention. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
CC amino acid sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in

PT its promoter, for milk-specific production of proteins and for regulating
PT fat content of milk.
XX
XX PS Claim 2c; Page 24-30; 44pp; German.
XX
XX CC This invention describes a novel milk gland-specific promoter of the
CC bovine acetyl coenzyme A carboxylase alpha gene (Accalpha), or its
CC fragments, which are used to control expression of foreign genes. When
CC the promoter (or the Accalpha structural gene) is replaced, at least in
CC part, by a sequence that is altered by deletion or substitution, then
CC expression of Accalpha in the milk gland is reduced and the milk produced
CC (by cattle, sheep or goats) has reduced fat content. Analysis of the
CC polymorphic 933-966 region of (Accalpha) is useful for genotyping
CC animals, producing a genotype that is directly correlated with Accalpha
CC expression during lactation and with fat content of the milk. This makes
CC it possible to generate populations of cattle that produce milk of high
CC or low fat content by classical breeding methods. Accalpha is a lactation
CC -specific, inducible promoter for expressing foreign proteins in the milk
CC and, when modified, results in milk of reduced fat content, which
CC facilitates recovery of proteins. This sequence represents a fragment
CC from bovine Accalpha which contains a fragment of exon 5A exon 6 and exon

XX CC The present sequence represents human acetyl coenzyme A-carboxylase alpha (ACC-alpha). The ACC-alpha protein was used in the course of the invention. The specification describes a molecular complex comprising a polypeptide having amino acids 1640-1663 of the human BRCA1 protein (or similar sequence from some other animal species), and a polypeptide that is a part of the acetyl coenzyme A-carboxylase alpha (ACC-alpha) protein able to bind the BRCA1 protein. The complex is implicated in predisposition to cancer of breast and ovary. It is used to screen for compounds that modulate interaction between BRCA1 and ACC-alpha, which are potentially useful for treatment, prevention and diagnosis of cancer, and to identify endogenous ligands. Modulated formation of the complex can be used for diagnosis of cancer. Antibodies directed against specific parts of human ACC-alpha are useful for localization of the complex in cells

XX PT In vitro diagnosis of cancer, particularly breast and ovarian cancer, or susceptibility, comprises detecting alterations in the acetyl coenzyme A-carboxylase alpha gene or protein expression.

XX PS Example 2; Page; 56pp; French.

XX CC The present sequence is a variant sequence for human acetyl-Coenzyme A-carboxylase-alpha (ACC-alpha). This sequence can be used for in vitro diagnosis of cancer (or of an increased risk of developing it), by detecting ACC-alpha gene mutations or polymorphisms, or altered ACC-alpha protein expression, relative to a control population. The method is particularly used to diagnose cancer, especially of breast or ovary, or for assessing the risk of developing such cancers. Note: The present sequence was not shown in the specification, but was derived from information given

 XX
 PS Disclosure; SEQ ID NO 1255; 17pp + Sequence Listing; English.
 XX
 XX The invention relates to multiprotein complexes from eukaryotes. Proteins
 CC of the invention and DNA sequences encoding them are given in records
 CC ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are
 CC obtainable by using a protein as a bait and isolating the set of proteins
 CC which is attached thereto from cells. Such protein complexes may comprise
 CC up to 30 distinct proteins. Protein complexes of the invention are useful
 CC for diagnosing a disease or disorder, or as a target for an active agent
 CC of a pharmaceutical, preferably a drug target in the treatment or
 CC prevention of a disease or disorder. Note: The sequence data for this
 CC patent is not represented in the printed specification, but is based on
 CC sequence information supplied by the European Patent Office. The complete
 CC document is available on CD-ROM

XX New proteins and protein complexes from eukaryotes, useful as targets in
 PT drug screening, or in diagnosing or screening for the presence of a
 PT disease or disorder, or a predisposition for developing a disease or
 PT disorder in a subject.

XX Disclosure; SEQ ID NO 1067; 13pp; English.

XX The invention relates to novel protein complexes comprising a first and a
 CC second protein, or its derivative, fragment, homologue or variant. The
 CC proteins are selected from given protein complexes, which are not defined
 CC in the specification. The variants are encoded by nucleic acids that
 CC hybridize to the nucleic acids encoding the proteins under low stringency
 CC conditions. The protein complexes are useful as targets for an active
 CC agent of a pharmaceutical. These protein complexes are particularly
 CC useful as drugs targets for the treatment or preventing of a disease or
 CC disorder. The complexes and methods above are useful in diagnosing or
 CC screening for the presence of a disease or disorder or a predisposition
 CC for developing a disease or disorder in a subject. These are also useful
 CC in screening for a drug for treatment or prevention of a disease or
 CC disorder. The molecule that modulates the amount, activity or protein
 CC components of the complex is useful for the manufacture of a medicament
 CC for the treatment or prevention of a disease or disorder. This sequence
 CC corresponds to a protein of the invention. (Note: the sequence data for
 CC this patent did not form part of the printed specification but was
 CC obtained from the EPO in electronic format).

XX New Lepidoptera calcium channel subunits, useful as active agents in
 PT agrochemical, veterinary or pharmaceutical fields, e.g. as insecticide,
 PT acaricide, or for treating infection, damage or discomfort caused by
 PT parasitic organisms.

XX Claim 1; SEQ ID NO 14; 144pp; English.

XX This invention relates to novel isolated nucleic acids from Lepidoptera
 CC that each encode a voltage-gated calcium channel subunit protein.
 CC Specifically, it refers to methods and screening assays to identify
 CC compounds that can target and modulate these channels and as such that
 CC have potential activity as pesticides. Accordingly, the present invention
 CC provides active agents that have applications in the agrochemical,
 CC veterinary and pharmaceutical fields, and can be used as an insecticide,
 CC nematocide, molluscicide, helminthicide, acaricide or other types of
 CC pesticides or biocides. In addition, they can be applied systemically (as
 CC additives) to the soil or habitat of the organism to act as crop
 CC protection agents or as a pesticide for household use to prevent or treat
 CC infection and/ or discomfort caused by parasitic organisms such as
 CC parasitic arthropods, nematodes or helminths. This polypeptide sequence
 CC is a tobacco budworm voltage-gated calcium channel protein subunit of the
 CC invention.

CC -!- FUNCTION: Catalyzes the hydrolysis of GTP bound to the 40S
ribosomal initiation complex (40S.mRNA.Met-tRNA[E].eIF-2.GTP) with
the subsequent joining of a 60S ribosomal subunit resulting in the
release of eIF-2 and the guanine nucleotide. The subsequent
joining of a 60S ribosomal subunit results in the formation of a
functional 80S initiation complex (80S.mRNA.Met-tRNA[E]).
CC -!- SUBUNIT: Monomer; but some authors state that this protein may not
be a monomer.
CC -!- SIMILARITY: Belongs to the eIF-2-beta/eIF-5 family.
